

### *Flashpoint\_F3\_v1.1 Instructions*

*Q1: When connecting the device with a USB data cable, the software does not show "Device connected successfully".*

*A: When using a USB-C port to connect the device, a hub connector is needed to connect the USB data cable. When using a USB-A port, the USB data cable can be directly connected.*

*Q2: After upgrading, the product cannot be powered on.*

*A: Please check if the corresponding firmware was used for the upgrade. For the Nano and the Retro Flash series (Lux Master) and products launched thereafter,*

Note: For more details, please download the latest instruction manual from the official website:
