Vertical Start:

Keep the battery positive (raised part) into the handle, before starting the phone or GOPRO, keep the basic balance of it, if unbalanced or in a very oblique angle sensor, please don't start to cause the sensor misjudgment! (In case of shaking, just hand righting the stabilizer) When using the Large-screen phone, hold the stabilizer gently in your left hand

Attention:

- 1. Only applies to lithium battery 18350 or 18650
- 2. Battery charger:
Red light battery charging, blue light full charged.

FAQ:

- 1. Why my stabilizer kept dithering or couldn't work after turning it on?
before pressing the power switch, please make sure the stabilizer is balanced and confirm the battery is fully charged.
- 2. When use the stabilizer for a long time, why it is unable to work well or the motor makes abnormal sound?
Please check the battery power level. Restart it after replacing the batteries
- 3. During shooting, touch the stabilizer carelessly to make it dithering how should we do?
Hold the stabilizer gently in a right direction, then you can continue to use.
