

Reflector Panel Sun Scrim Kit Manual

Introduction

The Glow Sun Scrim is the perfect professional mobile tool for taming glaring sun and reducing contrast during your photo or video shoot. The kit consists of a collapsible aluminum frame that can be easily assembled and fitted with interchangeable light modifying, light absorbing or opaque screens to transform any kind of strong light source from hard to soft, natural to artificial. The convenient size of our Glow Sun Scrim helps any photographer master the harsh nature of a powerful light source into a wide variety of diffused illumination solutions. Even the most severe, direct light is changed into a gentle and controllable source for still or video photographers as it reduces the intensity of any sunlight and filters softly on subjects being filmed or photographed.

The cleverly constructed lightweight 1 inch tubular anodized aluminum frame is hinged and jointed to form a stable rectangle, reinforced to hold its shape with 2 self-locking levers. Two sliding clamps grip the frame to link the frame handle bar, for attaching to the support stand of your choice, at any angle, to add to its effectiveness. The frame folds down to a flat, transportable and storage friendly compact size, in its own 40" x 7" x 7" zippered bag.

The main diffusion material is a translucent silk type fabric that is wrapped onto the constructed aluminum frame and Velcro fastened. The kit includes a reversible silver tone fabric for powerful and effective fill-in control on one side and a solid white fabric that acts as a perfect bounce tool for striking product and people shots with dimension, on the other. It all collapses to fit into a handy carrying bag, making it extremely portable and fast to set up.

Contains

- Collapsible 39" x 62" Aluminum Frame
- Translucent Screen of Artificial Silk Material
- Opaque Reversible Silver/White Material
- Frame Stand Adapter
- Instruction Manual

Instructions

Here's How To Assemble

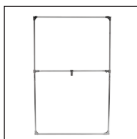

- First, remove the contents of the carry-case: Aluminum Frame, Frame Handle, and Fabrics

- Take the collapsible tubular aluminum frame and unfold it, snapping each joint open, to form the 39x62" rectangle.

- Two positional clamps with sockets for the frame handle are affixed to the long side of the frame. Loosen the winged knob on each and slide each clamp along the long pipe of the Sun Scrim frame about midway.

- Loosely tighten the winged knob clamp in place to the frame. Make sure that the side of the clamps with the socket holes are facing out.
- Take the aluminum frame handle and insert it into the opening of the first clamp. Tighten it into place with the wing knob.
- Take the other end of the frame handle and insert it in the second clamp opening and tighten both sides into place.

- Take the diffusion material of your choice, and attach it, by wrapping it on to frame using the Velcro strips. Fasten the panel gradually, to allow for the even placement along the frame, without causing stress to the assembly.

- The assembly is complete for placement and positioning.
- When finished using the scrim, simply remove the fabric from the frame, press the release lock buttons on the frame, and fold the structure on each hinge to prepare it for safe storage.

Features

- Alters and modifies strong light sources into soft, diffused illumination
- Serves as a great backdrop frame or support for material
- Professional interchangeable screens for still and video production
- Extremely stable tubular frame can be quickly assembled
- Lightweight and tough extruded aluminum frame
- Can be used outdoors even in windy conditions
- Fabrics and fasteners of high quality materials
- Highly portable. Take this kit anywhere in its own fabric case
