# Overview

The HDCU1700 Camera Control Unit is connected to a Sony HDC1700 high-definition video camera. It carries out signal processing and provides an interface for external equipment.

This unit may be combined with an MSU-1000 series Master Setup Unit (optional) or an RCP-1000 series Remote Control Panel (optional) to form a camera control system. Further, a system capable of controlling multiple video cameras can be configured by adding a CNU-700 Camera Command Network Unit.

The HDCU1700 has the following major features.

## Front panel for increased usefulness

The HDCU1700 features a design that places menu operation switches and status LEDs related to optical transmission, etc., on the front panel. These were moved from under the cover of the HDCU1000/1500's front panel, providing even greater convenience.

## Multiple video inputs and outputs

The HDCU1700 features the following standard-feature signal input/output ports.

- Four SDI outputs (HD/SD switchable outputs)
- Three HD-SDI/SD-SDI/SD analog return inputs
- One teleprompter input

In addition, a variety of input/output interfaces are offered via optional installable boards.

### HKCU2040 4K/HDR Processor Board

This provides functions, such as changing the resolution from the HD camera signal to 4K video, or video processing with the high dynamic range (HDR)\*<sup>1</sup>. 4K video can be output via the Multi-Link 3G-SDI signal or 12G-SDI signal\*<sup>2</sup>, or HD video can be output via the 3G-SDI signal or HD-SDI signal.

\*<sup>1</sup> The high dynamic range (HDR) function will be supported by the software version V3.10 or higher.

\*<sup>2</sup> 12G-SDI output will be supported by the software version V3.30 or higher.

### HKCU2007 3G/HD SDI Output Expansion Unit

This provides four 3G/HD-SDI outputs.

Installing this board makes it possible to output up to four 3G/HD-SDI signals.

### HKCU1001 SD Encoder Unit

Installing this board makes it possible to output SD analog composite signals (NTSC/PAL), SD picture monitor signals and SD waveform monitor signals.

### HKCU1003 Multi Interface Unit

This board consists of 3 types of VDA boards, and makes the following input/output signals possible:

- Frame reference input and output to lock 2-3 pull-down sequence

- SD analog component signal (RGB or Y/R-Y/B-Y) or SD analog composite signal output
- SD analog composite signal (NTSC/PAL) output, SD picture monitor signal output, SD waveform monitor signal output

## External reference signals

The HDCU1700 can be locked to an external reference signal. Either an HD tri-level sync signal or an SD sync (black burst) signal may be used as the reference signal.

## Built-in down converter

When the system is operating at a 59.94/50 Hz field frequency, HD signals can be converted to SD component SDI signals using the down converter. The output signal aspect ratio may be set to 4:3 edge crop, 16:9 squeeze, or letter box. The down converter has image enhancement, gamma control, and matrix ON/OFF features, and can be controlled externally.

## Built-in simplified up converter

The HDCU1700 has a simplified up converter to allow monitoring of SD signal return video using an HD viewfinder. The aspect ratio of the return video signal may be set to 4:3 edge crop, 16:9 squeeze, or letter box.

## Digital Optical Transfer

The HDCU1700 may be connected to a camera using an optical fiber cable (two single-mode optical fiber lines, two power lines and two control lines) for the transmission of digital video, audio, and control signals. By connecting together optical fiber cables, signals may be transmitted up to a maximum of 2,000 meters (6,600 feet). The maximum length of the cable supplying power varies with the camera system configuration and with the type of optical fiber cable.

The HDCU1700 supports standard digital optical transfer, and when used with an HDC1700 camera, can support 1080/50I, 59.94I recording and more via just one optical cable.

## Safety-oriented power supply

The HDCU1700 is designed for safety. When the power is turned on, a low voltage is supplied at first. Only after it has been verified that an appropriate camera is attached, the normal 180 V DC power supply is activated. The power is not supplied unless a camera is connected via an optoelectric cable.

Also, the HDCU1700 is equipped with an alarm indicator to warn of open or short circuits in the cable.

## Wide range of audio functions

This unit has connectors for two-channel analog audio outputs and a program audio input. Further, the HDCU1700 can use an intercom system with two independent channels, and supports four-wire and RTS/Clear-Com intercom systems.

*For information on support for RTS/Clear-Com systems, contact a Sony service or sales representative.*

## Remote control

The level and phases of this unit's output signals can be controlled remotely by an MSU-1000 series Master Setup Unit.

### **Microphone volume control**

The camera's microphone volume can be controlled via the MIC REMOTE connector, MSU, or RCP.

### **Character monitor signal output**

The results of the HDCU1700 self-diagnosis and setup menu can be obtained with a text display by character signal output.

### **Rack mountable**

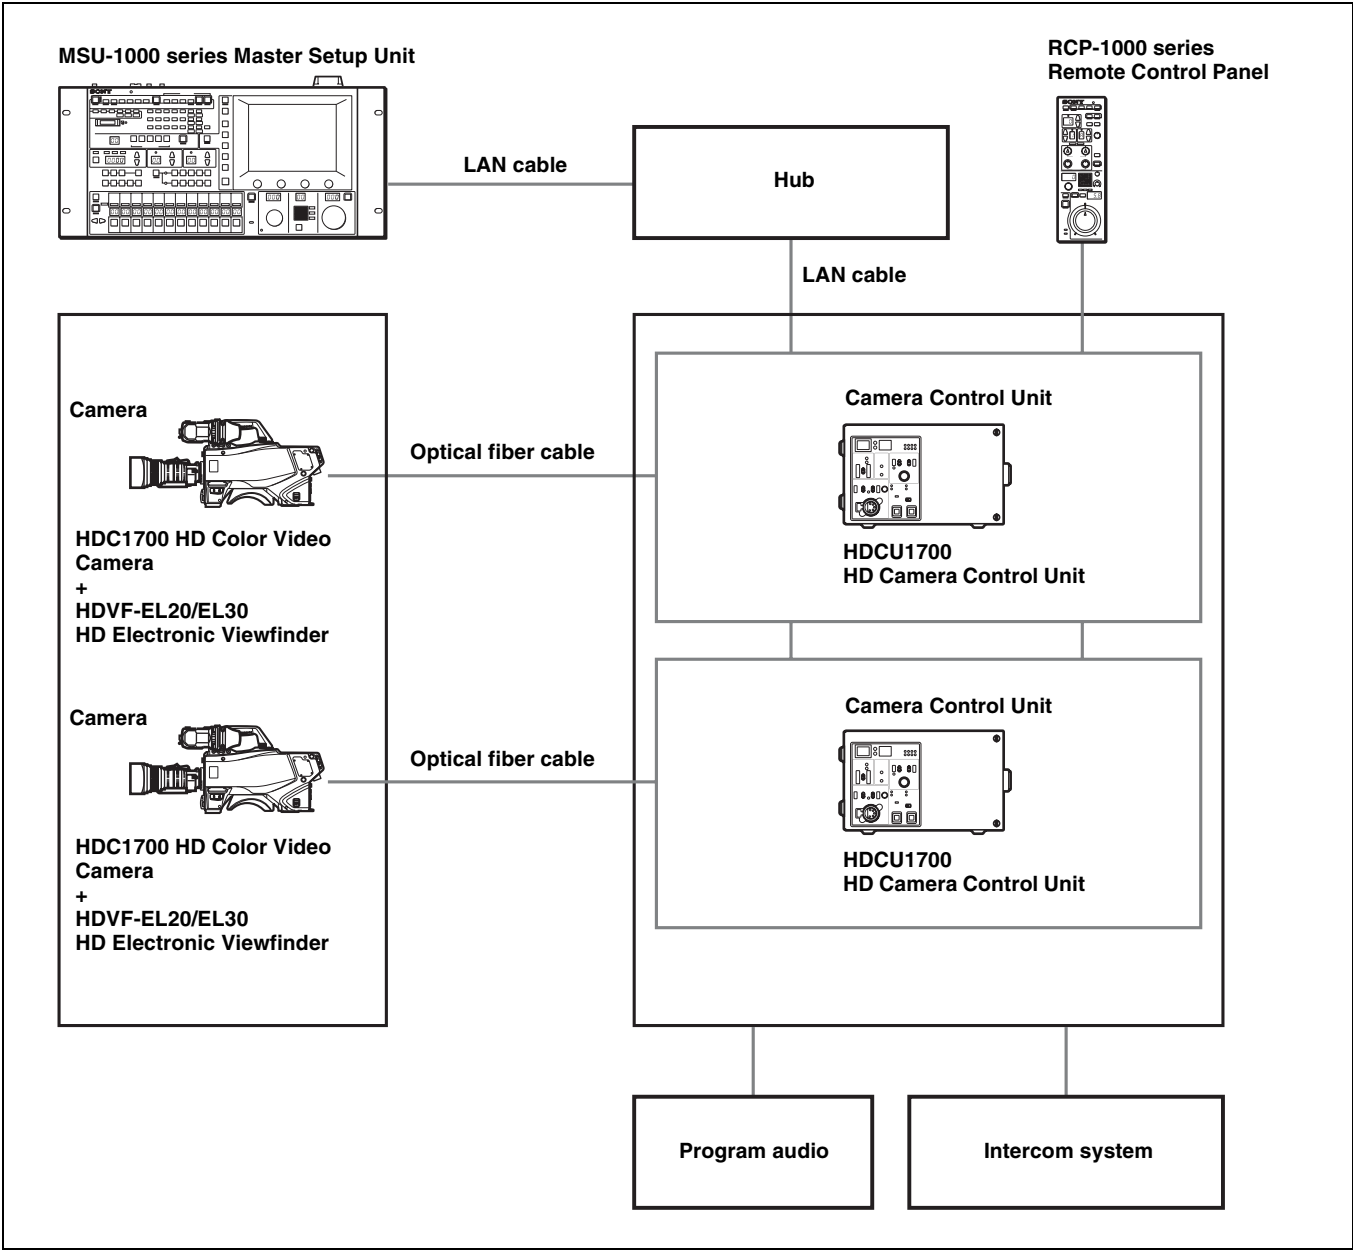

This unit may be installed in a standard EIA 19-inch rack (three units high). (The HDCU1700 needs the RMM-301 Rack Mount Adaptor (optional).)

### **Plug-in unit configuration**

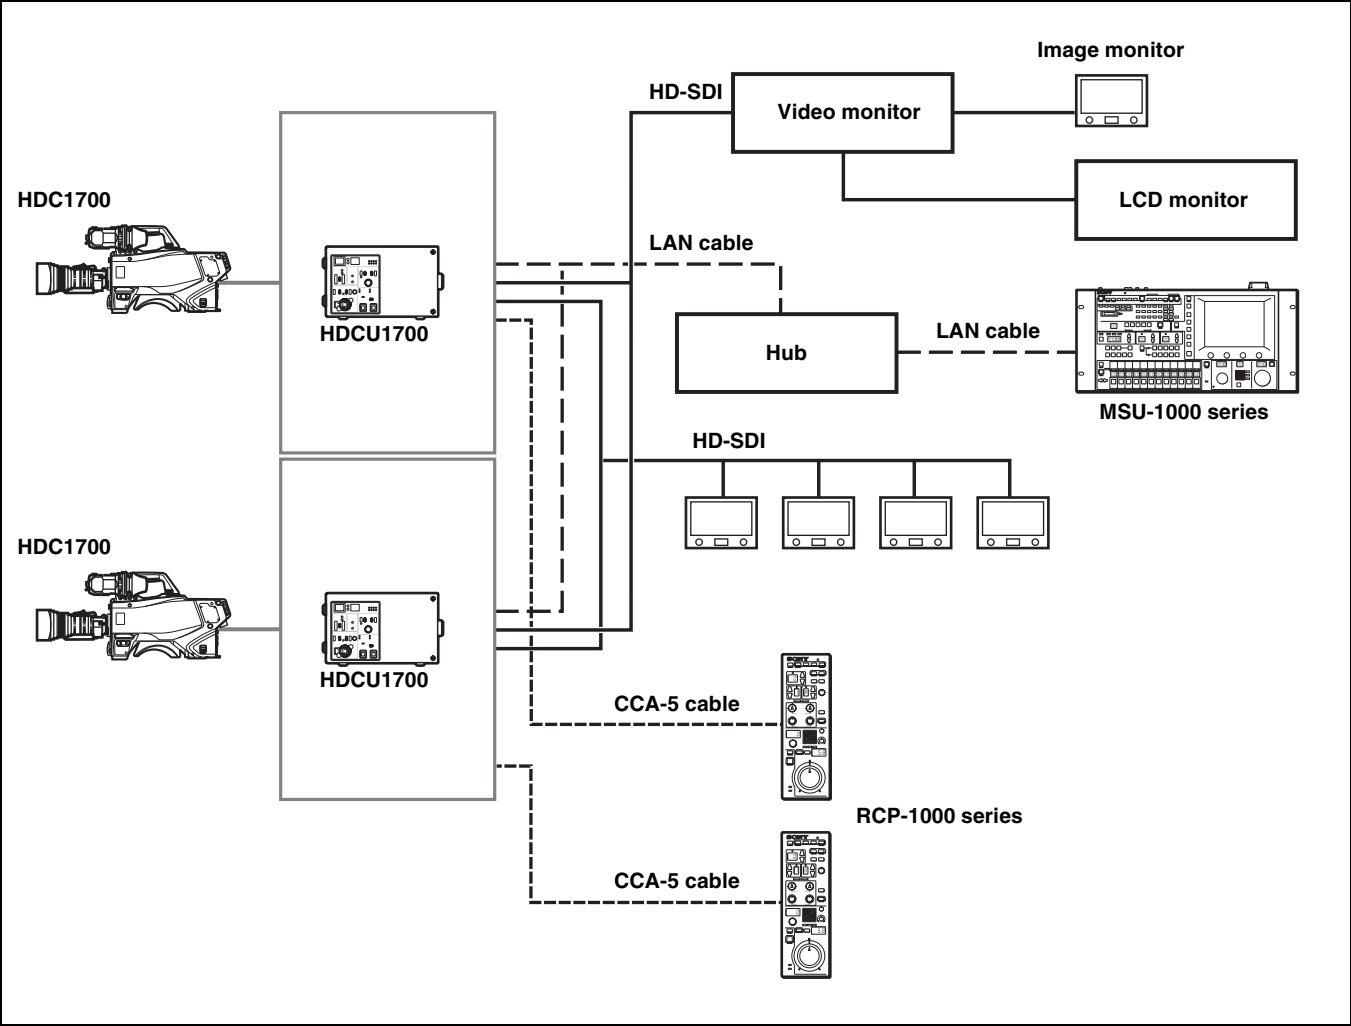

Internal printed circuit boards are designed for easy plug-in and removal, which makes it easy to inspect and maintain the unit.

## Front Panel

### 1 Red tally indicator

Lights in red when this unit receives a red tally signal. When the CALL button on the MSU-1000 series Master Setup Unit, RCP-1000 series Remote Control Panel, etc., is pressed, this indicator will go out if previously lit, and light up if previously off. You can attach the supplied number plate here.

### 2 Yellow tally indicator

Lights in yellow when this unit receives a yellow tally signal.

### 3 Green tally indicator

Lights in green when this unit receives a green tally signal.

### 4 CCU number display

The camera number set via the CCU menu is displayed.

### 5 Optical signal reception status indicator

This indicates the camera and CCU's optical signal reception status when performing optical transmissions.

**When the two lamps on the right (green) are lighted:**

Reception status is excellent.

**When the second lamp from the right (green) is lighted:**

Reception status is good.

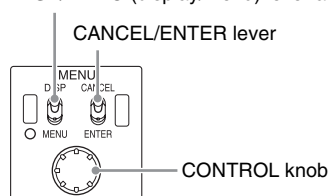

**When the second lamp from the left (yellow) is lighted:**

Reception status is low.

**When the lamp on the left (red) is lighted:** Reception status is at the lowest level.

### 6 MENU control block

DISP/MENU (display/menu) lever and indicator

- **DISP/MENU (display/menu) lever and indicator**

Selects the status display or setup menu display. In setup menu mode, the indicator turns on.

- **CANCEL/ENTER lever**

In setup menu mode, used to cancel and enter settings.

- **CONTROL knob (rotary encoder)**

In status screen mode, used to change the displayed page. In setup menu mode, used to move the cursor on a page and to change menu settings. Pressing the CONTROL knob performs the same function as setting the CANCEL/ENTER lever to the ENTER position.

## 7 CABLE ALARM indicators

**OPEN (red):** Lights in red when a camera isn't connected to the CAMERA connector on the rear panel of this unit via an optical fiber cable. Flashes when the connection status of an optical fiber cable is bad.

**SHORT (red):** Lights in red when the power supply cord of an optical fiber cable is short to external, or two power supply cords are short. Power isn't input to the camera when this indicator lights.

## 8 POWER switch and indicators

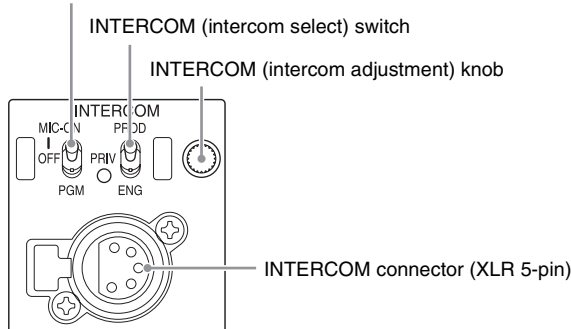

Turns the entire system on and off, including this unit, the video camera, and the RCP-1000 series Remote Control Panel connected to the REMOTE connector of this unit. The MAIN indicator and the CAM indicator light when the power switch is turned on. Pressing the CAM PW button of the master setup unit and the remote control panel turns off the video camera only, and only the CAM indicator turns off.

### Note

In order for the power supply to supply the unit with the necessary power to start up, energy is consumed even when this switch is set to OFF.

## 9 INTERCOM audio input/output and control block

MIC/PGM (microphone/program) switch

- **MIC/PGM (microphone/program) switch**

**ON:** Turns the headset microphone on.

**OFF:** Turns the headset microphone off.

**PGM:** Selects program audio output. In this mode, the INTERCOM knob adjusts the headset program audio level.

- **INTERCOM (intercom select) switch**

Selects the intercom signal input/output connection source for the INTERCOM connector on the front panel.

**PROD:** Connects the producer line.

**PRIV:** Blocks the connection to the producer line or engineer line, allowing private intercom talk between the CCU and the camera.

**ENG:** Connects the engineer line.

- **PRIV (Private) indicator**

Lights when the intercom is in private mode.

- **INTERCOM (intercom adjustment) knob**

Adjusts the receiver audio level of the intercom.

- **INTERCOM connector (XLR 5-pin)**

Connects the intercom headset.

*To use a headset with a plug other than an XLR 5-pin plug, consult a Sony service or sales representative.*

## 10 Network indicator

Displays the network system connection status.

**On:** When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000-series Remote Control Panel, or other device) is connected.

**Flashing:** When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates a connection problem with the external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000-series Remote Control Panel, or other device).

**Off:** When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that a LAN cable is not connected or that the network system connection parameters have not been set.

When the CNS SETTING in the NETWORK SETTING menu is set to LEGACY, this remains turned off.

## 11 Call button

When pressed, this outputs a call signal to the camera and external control device (the RCP-1000 series, etc.) that are connected to this unit. Use this when you want to call and speak with the camera operator or external control device operator via intercom.

## 12 Menu lock switch

This locks out operation of the front panel menu operation area.

## 13 Assignable button

You can set a function for this button via the CCU menu.

## 14 Status display indicator

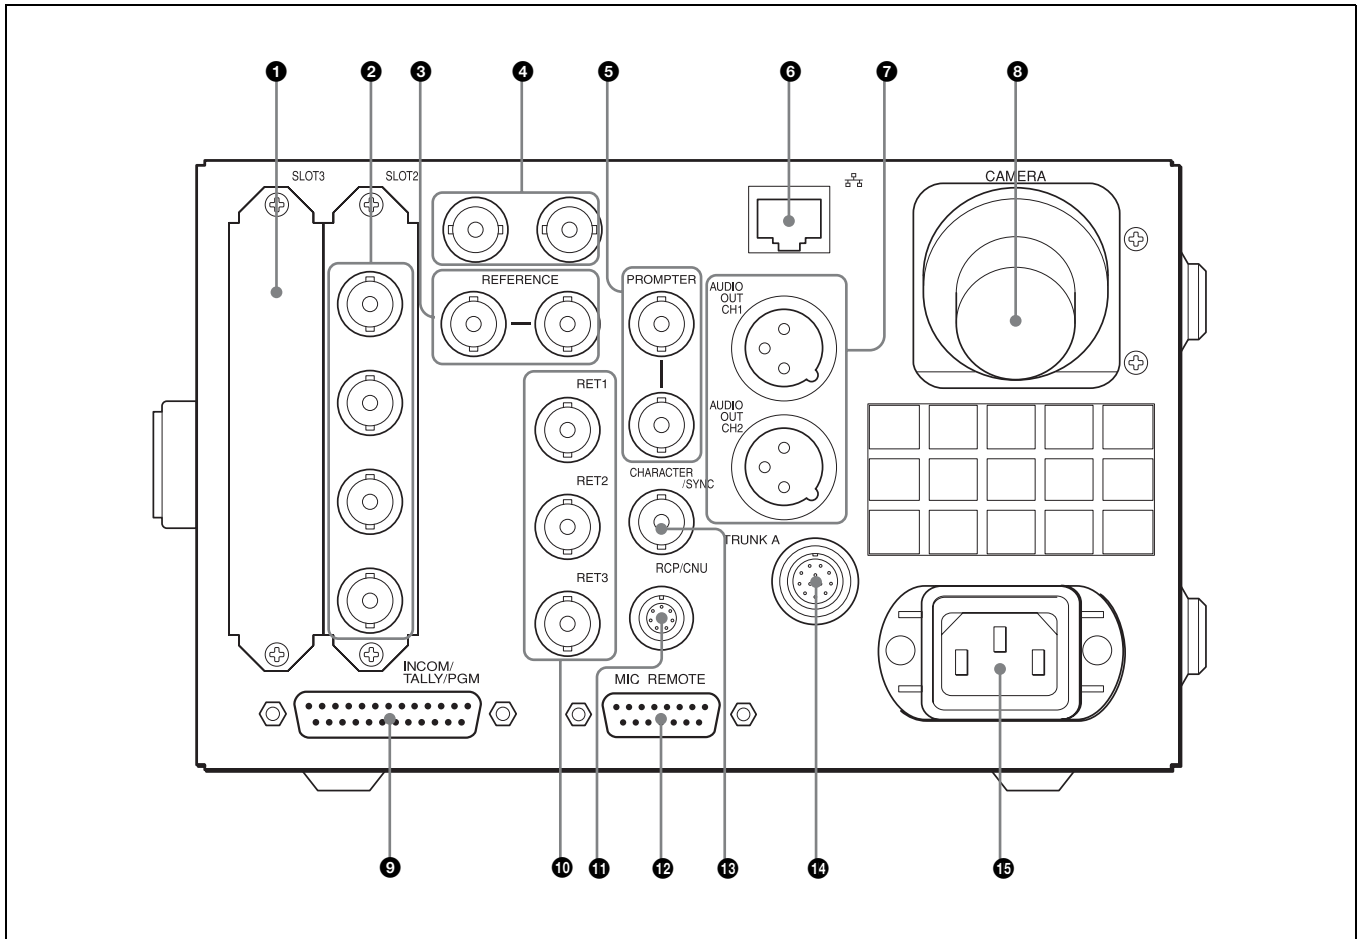

**REF IN (Green):** REFERENCE is being input.

**UNLOCK (Red):** The input REFERENCE is not locked.

**COM ERROR (Red):** There is a communication failure with the camera or other external control equipment (such as the RCP-1000 series Remote Control Panel).

**FAN STOP (Red):** The power fan is stopped.

## Rear Panel

### 1 Expansion slots

For installation of an optional HKCU2007 3G/HD SDI Output Expansion Unit, HKCU1001 SD Encoder Unit, or HKCU1003 Multi Interface Unit.

*For details on installation, contact a Sony service or sales representative.*

### 2 HD/SD SDI OUTPUT (SDI output connectors) area (BNC-type)

The signal from the video camera may be output as two HD-SDI signals or two SD-SDI signals. The signals output from the OUTPUT3 and OUTPUT4 connectors can be superimposed character and marker signals.

Signals of the same format are output from the SDI 1 and SDI 2 connectors; similarly, signals of another format can be output from the SDI 3 and SDI 4 connectors.

*For details on settings, contact a Sony service or sales representative.*

*When you exchange this slot with the optional HKCU2040 4K/HDR Processor Board, the number of 4K output increases by one or HD output increases by four.*

### 3 REFERENCE connectors (BNC-type)

Input an HD tri-level reference sync signal or SD reference sync signal (black burst signal, or black burst signal with 10 Field ID) to either of the two connectors.

The input signal is output from the other connector as is (loop-through output). If loop-through output is not used, terminate the unused connector at 75 ohms.

The type of reference signal is selected using the setup menu, or using the MSU-1000 series Master Setup Unit.

*For details on the setup menu, contact a Sony service or sales representative.*

### Note

To use the VBS signal of the HKCU1001 SD Encoder Unit or the HKCU1003 Multi Interface Unit (when SC phase lock is required), use an SD reference sync signal (black burst signal).

When black burst signal with 10 Field ID is input, REF 10F BB of OTHERS (C21) must be set to ON.

### 4 SPARE connector (BNC-type)

Reserved for future use.

### 5 PROMPTER (tele-prompter) connectors (BNC-type)

Input a teleprompter signal to either of the two connectors. The input signal is output from the other connector as is (loop-through output). If loop-through output is not used, terminate the unused connector at 75 ohms. If the signal used is a 1.0 Vp-p, 75-ohm signal, it may be output from the PROMPTER OUT connector of the video camera with a frequency bandwidth of 5 MHz, regardless of signal format.

#### **RET4 (return video input 4)**

When required, either of the PROMPTER connectors can be assigned for the fourth return video input, exclusively for analog VBS signals.

*For details on settings, contact a Sony service or sales representative.*

#### **⑥ (LAN) connector (RJ-45 8-pin)**

For LAN connection. Connect a LAN HUB (10BASE-T/100BASE-TX), using a LAN cable (shielded type of category 5 or more).

#### **⑦ AUDIO OUT CH1, CH2 (audio output 1, 2) connectors (XLR 3-pin)**

Used for output of the audio signal to the AUDIO IN connectors of the video camera.

#### **⑧ CAMERA connector (optical fiber connector)**

Used to connect a video camera, using an optical fiber cable. All video camera signals, including power supply, control, video, and audio, are sent and received over one optical fiber cable.

#### **Note**

Dust on the connection surface of the optical fiber cable may result in transmission errors. When not connected, always cover the end of the connector with the supplied cap.

#### **⑨ INTERCOM/TALLY/PGM (intercom/tally/program audio) connector (D-sub 25-pin)**

Used for input and output of intercom, tally, and program audio signals. Connect to the intercom/tally/program audio connector of the intercom system.

**Flag function:** 10-pin is assigned for the output pin of the Flag function.

#### **⑩ RET1, RET2, RET3 (return video input 1, 2, 3) connectors (BNC-type)**

- Three different return video input signals may be received independently.
- The selection of the return video input signal is made by the return video switch of the video camera.
- The input signal may be set to HD-SDI, SD-SDI, or analog VBS, using the setup menu, or using the MSU-1000 series Master Setup Unit.

*For details on the setup menu, contact a Sony service or sales representative.*

*Refer also to the Master Setup Unit manual.*

#### **⑪ RCP/CNU connector (round 8-pin)**

Used to connect to an MSU-1000 series Master Setup Unit, CNU-700 Camera Command Network Unit, or RCP-1000 series Remote Control Panel via a CCA-5 Connection Cable. Control signals are sent and received via this connector. When using an RCP-1000 series unit, power is also supplied.

#### **⑫ MIC REMOTE (microphone remote) connector (D-sub 15-pin)**

Using this connector, the video camera's microphone input level may be set by external equipment such as an audio mixer, in five level (−60, −50, −40, −30, and −20 dB). When shooting, set the volume to a level appropriate for the audio

conditions. This connector also outputs red, yellow and green tally signals.

When DSUB-15 in the CCU CONFIGURATION menu is set to WF REMOTE and an MSU-1000 series Master Setup Unit or an RCP-1000 series Remote Control Panel is used to remotely control a waveform monitor display, use a connector that is compatible with recall-type waveform monitors. On the recall-type waveform monitor, set/preset the display mode to waveform monitor, and then select (recall) that mode externally.

*The microphone input level may also be set using the setup menu. For details on the setup menu, contact a Sony service or sales representative.*

#### **⑬ CHARACTER/SYNC connector (BNC-type)**

Outputs the self-diagnostic results or the setup menu as an SD monochrome analog video signal.

When CHARA/SYNC in the CCU CONFIGURATION menu is set to SYNC, this can also be used as a SYNC connector. SD composite sync or an HD3 synchronous signal will be output from the internal sync signal generator. (The default is set to SD composite sync.)

*For details on signal selection, contact a Sony service or sales representative.*

#### **⑭ TRUNK A connector (round 12-pin)**

Used to connect to the CCU connector on a video camera via an RS-232C or RS-422A interface. Communication with up to two channels is available.

#### **⑮ AC IN (AC power input) connector**

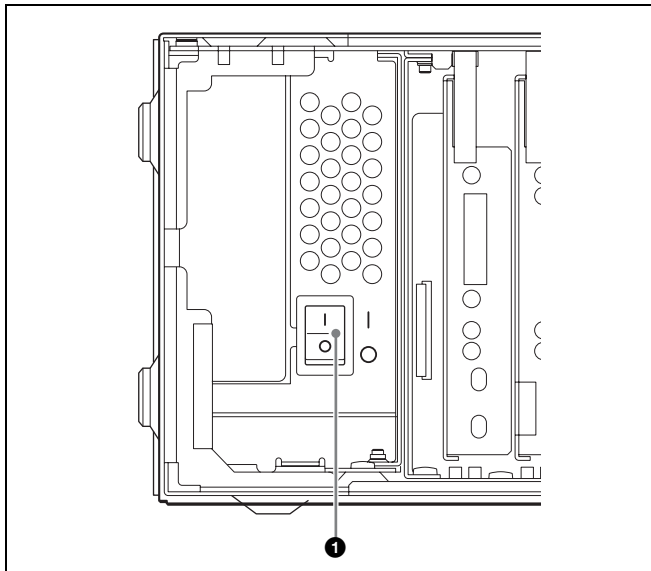

Use the specified AC power cord to connect to an AC power supply. The AC power cord can be secured to this unit, using the plug holder (optional).

## Internal Switches

### Note

To reduce the risk of electric shock, fire or injury, do not open the cabinet. To adjust the internal settings, refer to qualified service personnel.

The following switches are located inside the unit, behind the front panel:

### 1 Internal main power switch

When an abnormality has occurred, and power cannot be cut off with the POWER switch on the front panel, you may turn off the unit using the internal main power switch. When the switch is set to OFF, setting the POWER switch on the front panel to ON doesn't turn on the unit.

## HKCU2040 4K/HDR Processor Board (optional)

### Note

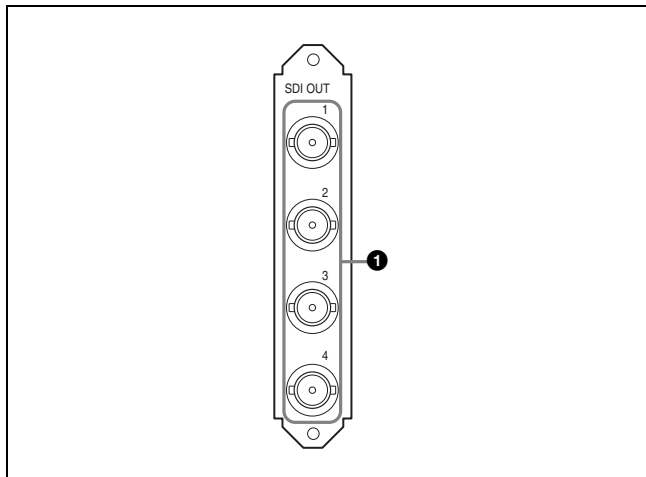

To reduce the risk of electric shock, fire or injury, do not open the cabinet. To adjust the internal settings, refer to qualified service personnel.

The HKCU2040 4K/HDR Processor Board consists of a DPR front board, a DIF rear board and an HIF rear board.

The HIF-57 board is not used in this unit. The number of the Quad Link 3G-SDI signal increases by one or four 12G-SDI signals as 4K outputs, or four HD outputs.

*For details on installation, contact a Sony service or sales representative.*

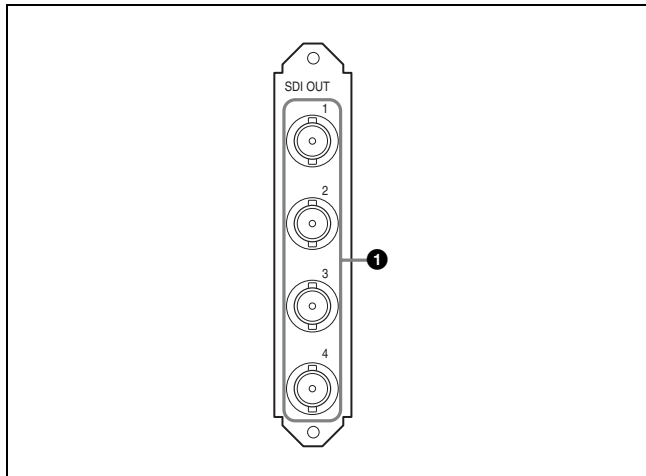

## DIF-247 Board

### 1 SDI OUT 1, 2, 3, 4 (3G/HD serial digital interface output 1-4) connectors (BNC-type)

One Quad Link 3G-SDI signal or four 12G-SDI signals can be selected as 4K output when the camera is set to 1080P(4K/HDR). Four 3G-SDI or HD-SDI signals may be output when camera is set to others.

## HIF-57 Board (Not used in this unit)

### 1 SDI OUT 1, 2, 3, 4 (3G/HD serial digital interface output 1-4) connectors (BNC-type)

The signal from the video camera may be output as four 3G-SDI or HD-SDI signals.

## HKCU2007 3G/HD SDI Output Expansion Unit (optional)

### Note

To reduce the risk of electric shock, fire or injury, do not open the cabinet. To adjust the internal settings, refer to qualified service personnel.

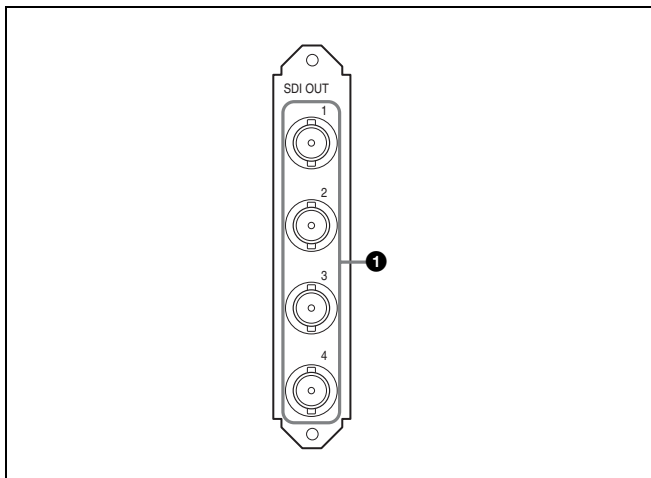

The HKCU2007 3G/HD SDI Output Expansion Unit consists of a DRX front board and an HIF rear board.

When these boards are installed in the front and rear expansion slots of the unit, the number of 3G/HD-SDI output connectors increases by four. These can also be installed on HDCU1700's expansion slots.

The format of SDI signals output via each upper/lower pair of connectors on the HIF board can be set.

*For details on installation, contact a Sony service or sales representative.*

### HIF-57 Board

#### ① SDI OUT 1, 2, 3, 4 (HD serial digital interface output 1-4) connectors (BNC-type)

The signal from the video camera may be output as four 3G/HD-SDI signals.

### HKCU1001 SD Encoder Unit (optional)

#### Note

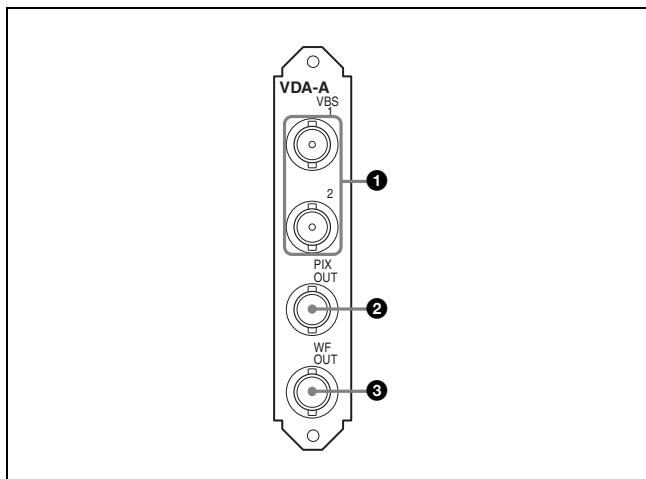

To reduce the risk of electric shock, fire or injury, do not open the cabinet. To adjust the internal settings, refer to qualified service personnel.

The HKCU1001 consists of an EN-A front board and a VDA-A rear board.

When these boards are installed in the front and rear expansion slots of the unit, the unit outputs SD composite signals, waveform monitor output signals, and picture monitor output signals through the VDA-A board's connectors.

*For details on installation, contact a Sony service or sales representative.*

### VDA-A Board

#### ① VBS 1, 2 (composite video output 1, 2) connectors (BNC-type)

The signal from the video camera may be output as two analog composite signals.

#### ② PIX OUT (picture monitor output) connector (BNC-type)

Outputs the video signal for a picture monitor selected with the PICTURE MONITOR button of an RCP-1000 series Remote Control Panel or MSU-1000 series Master Setup Unit.

Character signals or marker signals can be superimposed on the video signal output through this connector.

*For details on these operations, refer to the Master Setup Unit or Remote Control Panel manuals.*

#### ③ WF OUT (waveform monitor output) connector (BNC-type)

Outputs the video signal for a waveform monitor selected with the WF MONITOR button of an RCP-1000 series Remote Control Panel or MSU-1000 series Master Setup Unit.

*For details on these operations, refer to the Master Setup Unit or Remote Control Panel manuals.*

### HKCU1003 Multi Interface Unit (optional)

#### Note

To reduce the risk of electric shock, fire or injury, do not open the cabinet. To adjust the internal settings, refer to qualified service personnel.

The HKCU1003 consists of an EN-B front board and three VDA rear boards (A/B/C).

When the EN-B board and one of the VDA rear boards are installed in the front and rear expansion slots of the unit, the unit inputs or outputs the following signals.

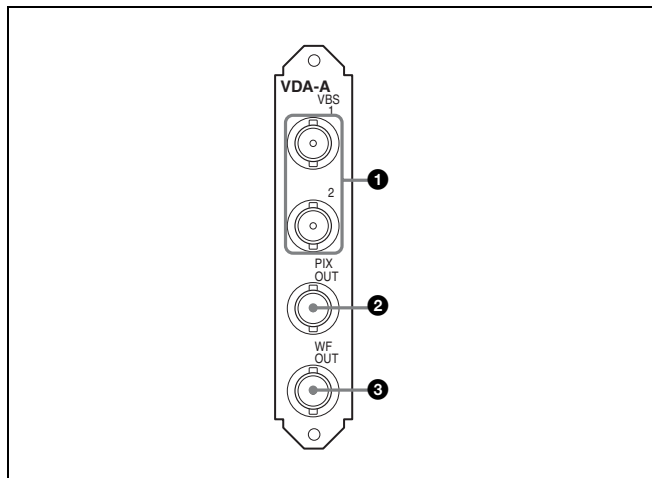

- Outputs SD composite signals, waveform monitor output signals, and picture monitor output signals through a VDA-A board.
- Inputs/outputs the frame sequence signal when operating a 24P system through a VDA-B board.

- Outputs analog component signals or analog composite signals through a VDA-C board.

When you use either the VDA-A board or the VDA-B board, insert the EN-B board in the corresponding expansion slot on the front of the HDCU1700. When either the VDA-A board or the VDA-B board is installed, you can insert the VDA-C board in an expansion slot on the rear panel of the HDCU1700. Don't insert any board in the corresponding expansion slot on the front of the HDCU1700.

*For details on installation, contact a Sony service or sales representative.*

## VDA-A Board

### ① VBS 1, 2 (composite video output 1, 2) connectors (BNC-type)

The signal from the video camera may be output as two analog composite signals.

### ② PIX OUT (picture monitor output) connector (BNC-type)

Outputs the video signal for a picture monitor selected with the PICTURE MONITOR button of an RCP-1000 series Remote Control Panel or MSU-1000 series Master Setup Unit. Character signals or marker signals can be superimposed on the video signal output through this connector.

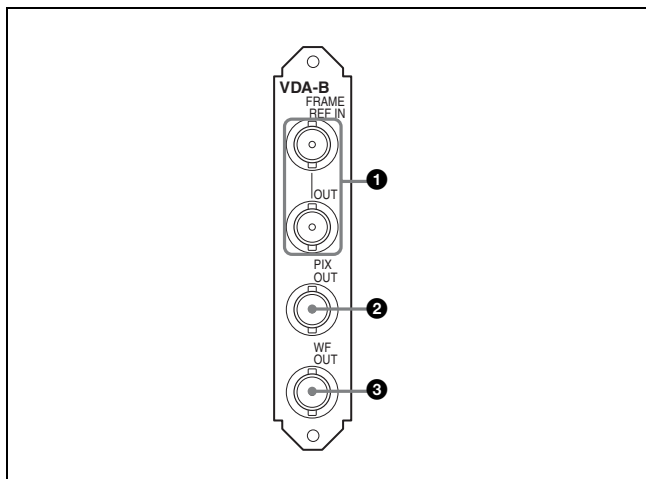

*For details on these operations, refer to the Master Setup Unit or Remote Control Panel manuals.*

### ③ WF OUT (waveform monitor output) connector (BNC-type)

Outputs the video signal for a waveform monitor selected with the WF MONITOR button of an RCP-1000 series Remote Control Panel or MSU-1000 series Master Setup Unit.

*For details on these operations, refer to the Master Setup Unit or Remote Control Panel manuals.*

## VDA-B Board

### ① FRAME REF IN, OUT (frame reference input/output) connectors (BNC-type)

Input an HD tri-level reference sync signal or SD reference sync signal (black burst signal) for the sequence-lock between the camera control units, to the upper of the two connectors. The input signal is output from the lower connector as is (loop-through output).

When not using the OUT connector, terminate it at 75 ohms.

### ② PIX OUT (picture monitor output) connector (BNC-type)

Outputs the video signal for a picture monitor selected with the PICTURE MONITOR button of an RCP-1000 series Remote Control Panel or MSU-1000 series Master Setup Unit.

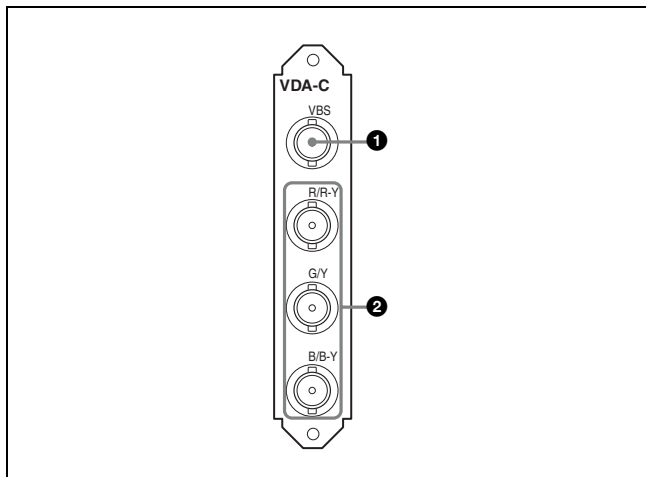

*For details on these operations, refer to the Master Setup Unit or Remote Control Panel manuals.*

### ③ WF OUT (waveform monitor) connector (BNC-type)

Outputs the video signal for a waveform monitor selected with the WF MONITOR button of an RCP-1000 series Remote Control Panel or MSU-1000 series Master Setup Unit.

*For details on these operations, refer to the Master Setup Unit or Remote Control Panel manuals.*

## VDA-C Board (Not used in this unit)

**❶ VBS (composite video signal output) connector (BNC-type)**

The signal from the video camera may be output as an analog composite signal.

**❷ R/R-Y, G/Y, B/B-Y (component video signal output) connectors (BNC-type)**

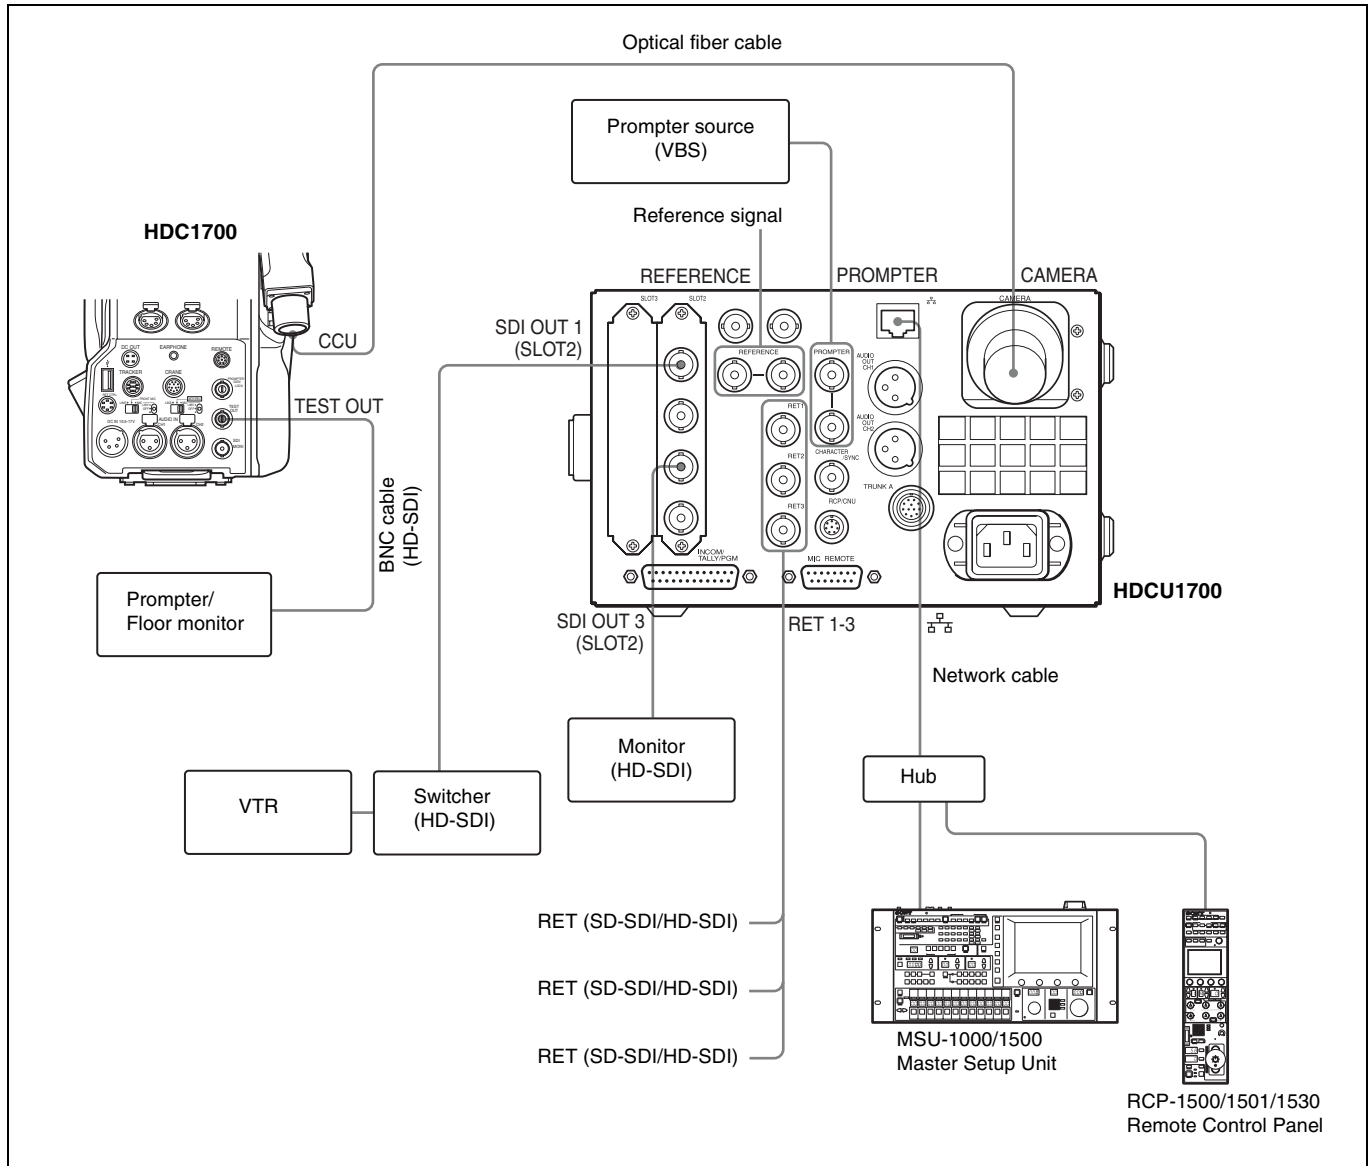

The signal from the video camera may be output as a R/R-Y, G/Y, B/B-Y component signal or an RGB component signal.

# Connections and Settings

## Fiber Transmission System

The camera and the camera control unit are connected via a single optical fiber cable, and the optical transmission is achieved.

# Setup Menu

The CCU system and peripheral settings can be checked and modified using a picture monitor connected to the PIX output.

## Changing Menu Item Settings

The menu screen is controlled using the knob and levers in the MENU control block on the front panel. Setting the CANCEL/ENTER lever to the ENTER position and pressing the CONTROL knob perform the same function.

### To display a menu page

Set the DISP/MENU lever to the MENU position. When first powered on, the CCU MENU page is displayed.

### To display the CCU MENU page

In menu display mode, turn the CONTROL knob to move the pointer (➡) to TOP in the upper right corner of the menu page, then press the CONTROL knob. The CCU MENU showing the menu configuration is displayed.

** CCU MENU **
➡SYSTEM OPERATION
CCU CONFIGURATION
NETWORK SETTINGS

Menu name	Description
SYSTEM OPERATION	Input/output signal format and system-related settings
CCU CONFIGURATION	CCU configuration settings
NETWORK SETTINGS	Network-related settings

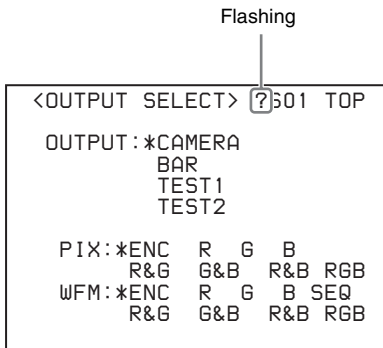

### To select an item in the CCU MENU

Turn the CONTROL knob to move the pointer (➡) up/down to the desired menu item, then press the CONTROL knob. The most recently viewed page in the selected menu is displayed.

### To change the displayed page

- 1 Turn the CONTROL knob to move the pointer (➡) to the page number, then press the CONTROL knob.

The pointer (➡) changes to a flashing question mark (?).

**2 Turn the CONTROL knob to change the displayed page to the desired page, then press the CONTROL knob.**

The question mark (?) changes back to the pointer (➡). Items on the page can now be selected and changed.

**To change a menu item setting**

If a question mark (?) is displayed beside the page number, press the CONTROL knob to restore the pointer (➡). Items on the page can now be selected and changed.

**1 Turn the CONTROL knob to move the pointer (➡) to the desired item, then press the CONTROL knob.**  
The pointer (➡) changes to a flashing question mark (?).

**2 Turn the CONTROL knob to change the setting.**

**To cancel a changed setting**

Set the CANCEL/ENTER lever to the CANCEL position before pressing the CONTROL knob. The item is restored to its current setting.

**To suspend menu changes**

Set the DISP/MENU lever to the MENU position to exit the menu screen.

The DISP/MENU lever can be set to the MENU position again to restart the operation.

**3 Press the CONTROL knob.**

The question mark (?) changes back to the pointer (➡), and the item setting is registered.

**4 Repeat steps 1 to 3 to change other settings on the same page.**

**To enter a character string**

Some menu items require a character string input.

Moving the pointer (➡) to an item with a character string input and pressing the CONTROL knob displays a rectangular cursor and a list of selectable characters. Turning the CONTROL knob moves the cursor between characters.

The following menu item has character strings:

- CCU CONFIGURATION menu → <BAR CHARACTER>  
page → BAR CHARACTER

**1 Move the text cursor to the input position, then press the CONTROL knob.**

A second cursor is displayed in the character list.

**2 Turn the CONTROL knob to move the cursor to the desired character, then press the CONTROL knob.**

Repeat steps 1 and 2 to enter other characters.

- Select INS to insert a space character at the cursor position.
- Select DEL to delete the character at the cursor position.
- Select RET to return to step 1 without changing the string.
- Entering the maximum number of characters (up to the right edge) moves the cursor to ESC on the lower right of the character list.

**3 Turn the CONTROL knob to move the cursor to END, then press the CONTROL knob.**

The new input string is registered.

**To cancel the character string setting**

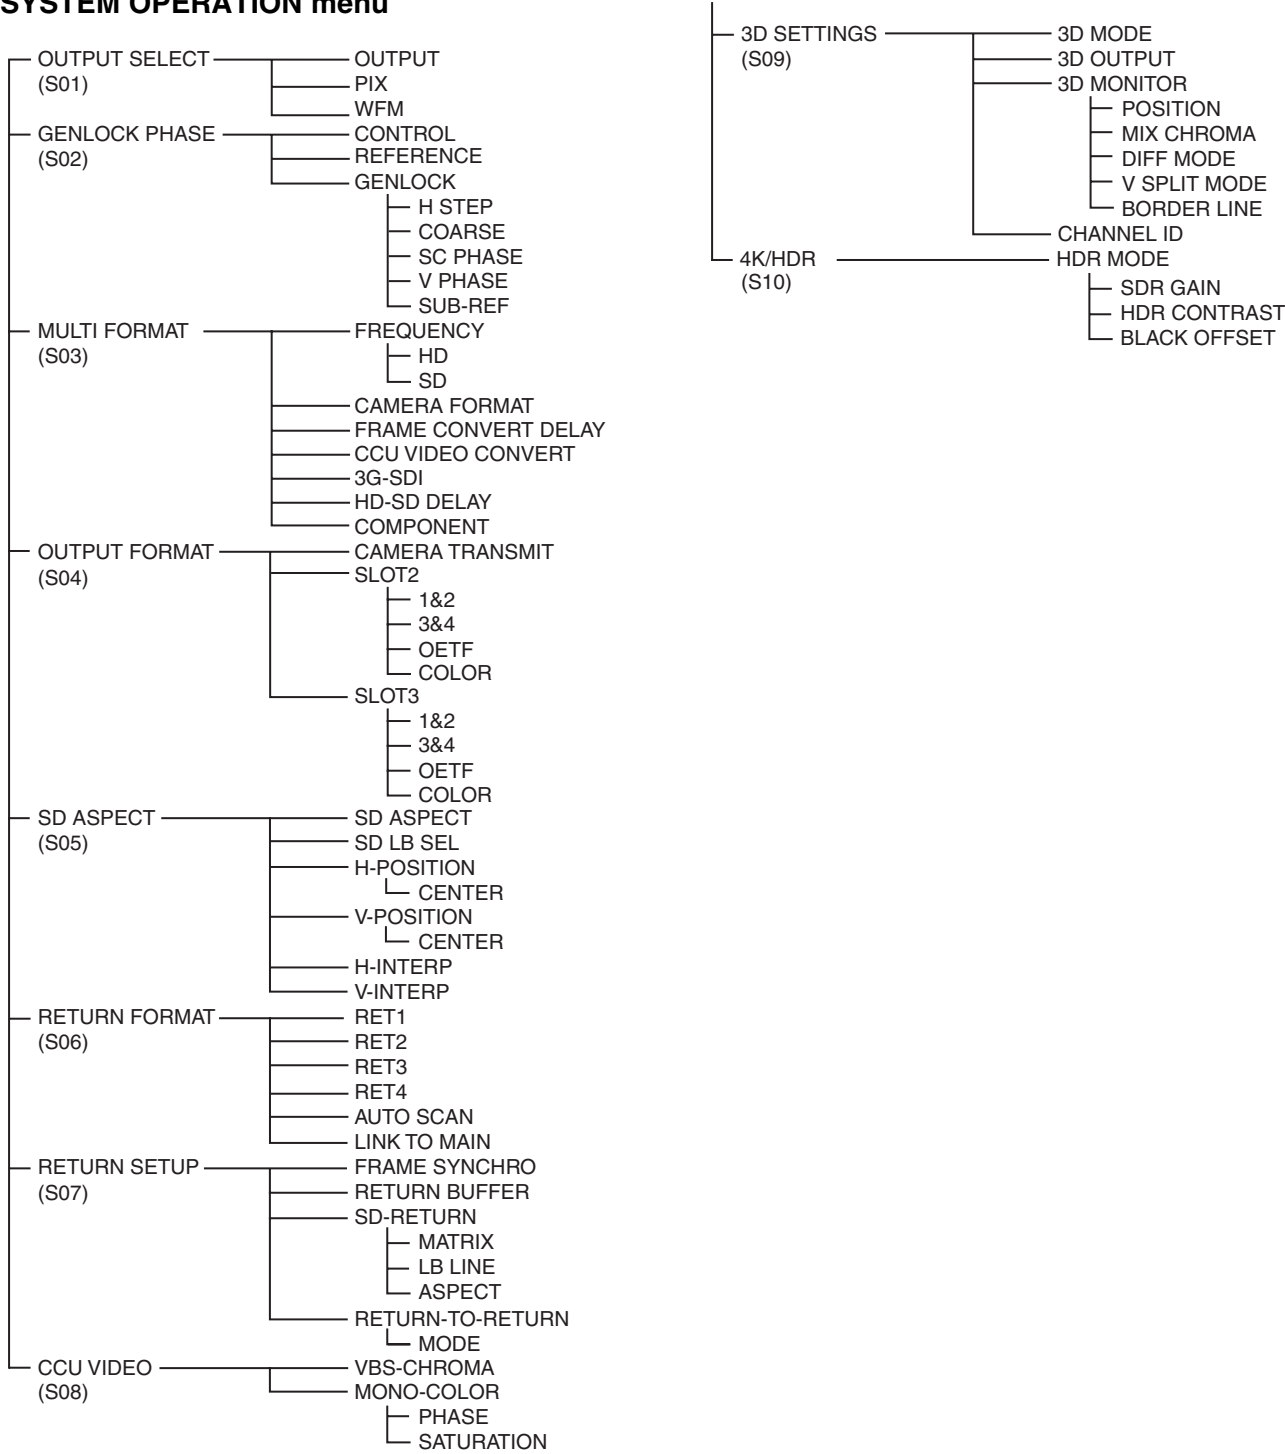

Turn the CONTROL knob to move the cursor to ESC, then press the CONTROL knob.

**To exit the menu display**

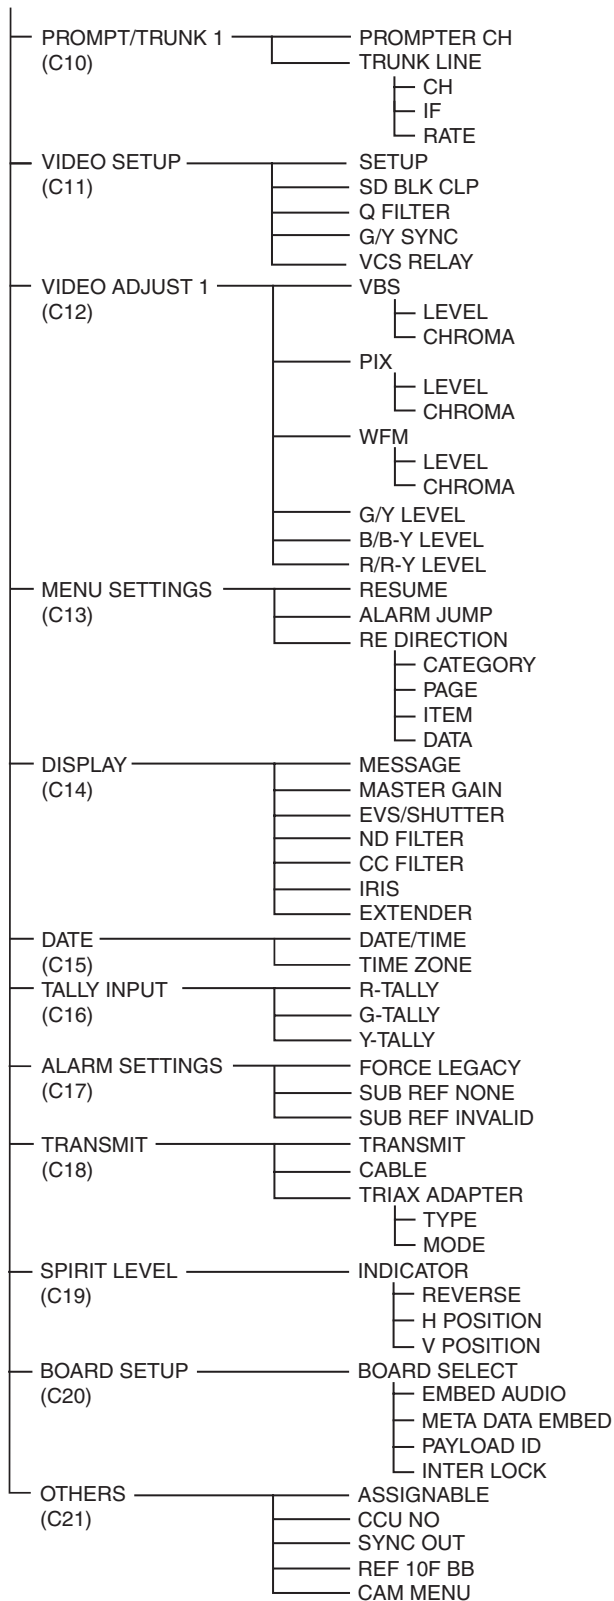

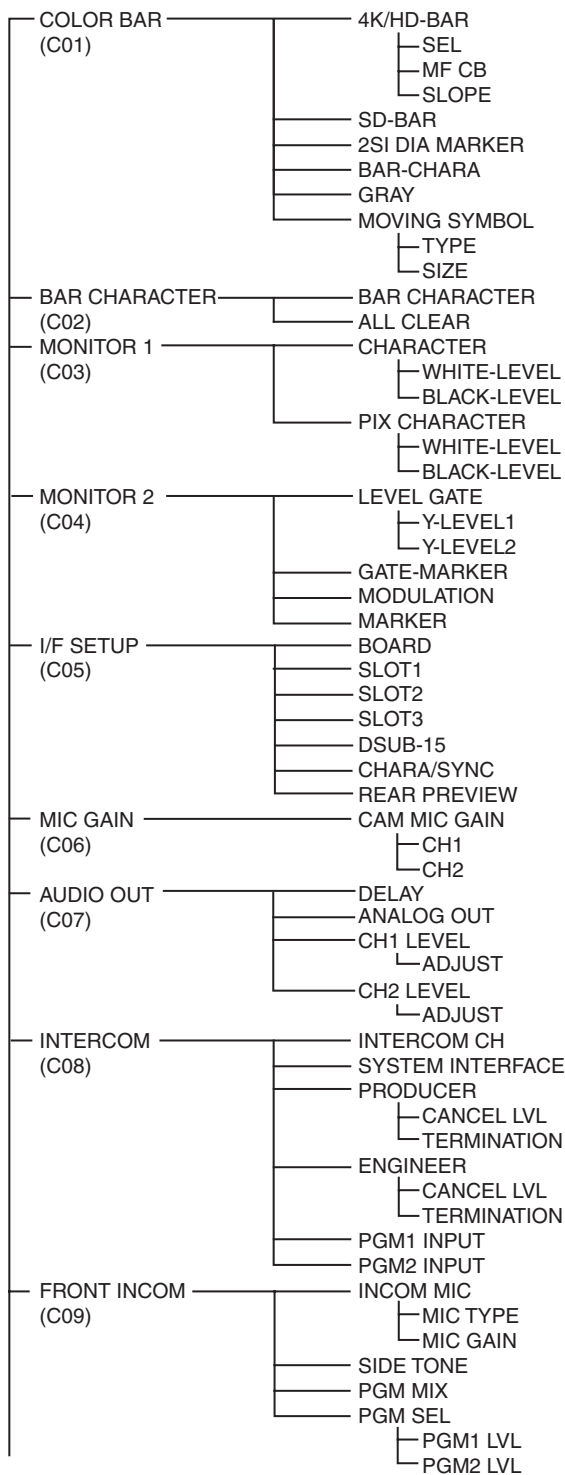

In menu display mode, set the DISP/MENU lever to the MENU position.

## Notes on Use

### Use and storage locations

Avoid using or storing the unit in the following places:

- Where it is subject to extremes of temperature (operating temperature:  $-10$  to  $+40^{\circ}\text{C}$  ( $14$  to  $104^{\circ}\text{F}$ )). Note that in summer the temperature in a car with the windows closed can reach  $50^{\circ}\text{C}$  ( $122^{\circ}\text{F}$ ).
- Very damp or dusty places.
- Where rain is likely to reach the unit.
- Places subject to severe vibration.
- Near strong magnetic fields.
- Near transmitting stations generating strong radio waves.

### Avoid violent impacts

Dropping the unit, or otherwise imparting a violent shock to it, is likely to cause it to malfunction.

### Do not cover with cloth

While the unit is in operation, do not cover it with a cloth or other material. This can cause the temperature to rise, leading to a malfunction.

### After use

Set the POWER switch on this unit to the OFF position.

### Care

If the body or panels of the unit become dirty, wipe them with a dry cloth. For severe dirt, use a soft cloth steeped in a small amount of neutral detergent, then wipe dry. Do not use volatile solvents such as alcohol or thinners, as these may damage the finish.

## Error Messages

When an error is detected in this unit or the camera, the ALARM indicator turns on and an error message is displayed on this unit.

Error message	Indication
CCU:GEN LOCK NG	External reference sync error
CCU:DRX NG	Front DRX board power supply, PLD error
CCU:SDI NG	Rear SDI board power supply error
CCU:PS FAN NG	Power supply block fan error
CCU:PS CABLE SHORT	CAMERA connector optical fiber cable short circuit error
CCU:PS CABLE OPEN	CAMERA connector optical fiber cable open circuit error
CCU:PS RCP PWR SUPPLY NG	Remote control panel (connected to REMOTE connector) power supply error
CCU:RX WARNING	Transmission error between camera and CCU
CCU: CAM INVALID FORMAT	An invalid format is selected.
CCU:DPR NG	Front DPR board power supply, PLD error
CCU:DPR FAN NG	DPR board fan error

## HKCU2007 (optional)

General	
Power supply	5.5 W
Operating temperature	−10°C to +40°C (14°F to 104°F)
Storage temperature	−20°C to +60°C (−4°F to +140°F)
Dimensions (w/h/d)	DRX board: Approx. 19 × 110 × 226 mm (3/4 × 4 3/8 × 8 7/8 inches) HIF board: Approx. 19 × 98 × 159 mm (3/4 × 3 7/8 × 6 1/4 inches)
Mass	DRX board: Approx. 0.24 kg (8 oz) HIF board: Approx. 0.09 kg (3 oz)
Output connectors

## HKCU1001 (optional)

General	
Power supply	2.5 W
Operating temperature	−10°C to +40°C (14°F to 104°F)
Storage temperature	−20°C to +60°C (−4°F to +140°F)
Dimensions (w/h/d)	EN-A board: Approx. 19 × 110 × 226 mm (3/4 × 4 3/8 × 8 7/8 inches) VDA-A board: Approx. 19 × 98 × 159 mm (3/4 × 3 7/8 × 6 1/4 inches)
Mass	EN-A board: Approx. 0.22 kg (7.8 oz) VDA-A board: Approx. 0.10 kg (3.5 oz)
Output connectors	
VDA-A board	
VBS	BNC-type (2), 1.0 Vp-p, 75 ohms, VBS
PIX OUT	BNC-type (1), VBS/R/G/B (VBS 1.0 Vp-p, 75 ohms)
WF OUT	BNC-type (1), VBS/R/G/B/SEQ (VBS 1.0 Vp-p, 75 ohms)
Supplied accessories	
4-pin connector (1)	

Design and specifications are subject to change without notice.

## HKCU1003 (optional)

General	
Power supply	3.6 W
Operating temperature	−10°C to +40°C (14°F to 104°F)
Storage temperature	−20°C to +60°C (−4°F to +140°F)
Dimensions (w/h/d)	EN-B board: Approx. 19 × 110 × 226 mm (3/4 × 4 3/8 × 8 7/8 inches) VDA-A/B/C board: Approx. 19 × 98 × 159 mm (3/4 × 3 7/8 × 6 1/4 inches)
