# Overview

The HDCU3100 Camera Control Unit connects to a Sony HDC2000 Series <sup>1)</sup> or HSC300RF/100RF HD Color Camera with an optical fiber cable, and performs signal processing, provides an interface with external equipment, and supplies power to the camera.

The unit is equipped with a down-converter for converting HD signals <sup>2)</sup> transferred from the camera to SD signals <sup>3)</sup> and an up-converter for converting SD signals to HD signals, which give the unit the flexibility to operate in both high-definition and standard-definition camera systems.

1) HDC2000 series: HDC2000/2580/2500/2400/1700

2) HD (high-definition) signals: Generic name for 1125-/750-line HDTV signals.

3) SD (standard-definition) signals: Generic name for NTSC/PAL signals, 525/625 component signals, and 525/625 composite signals.

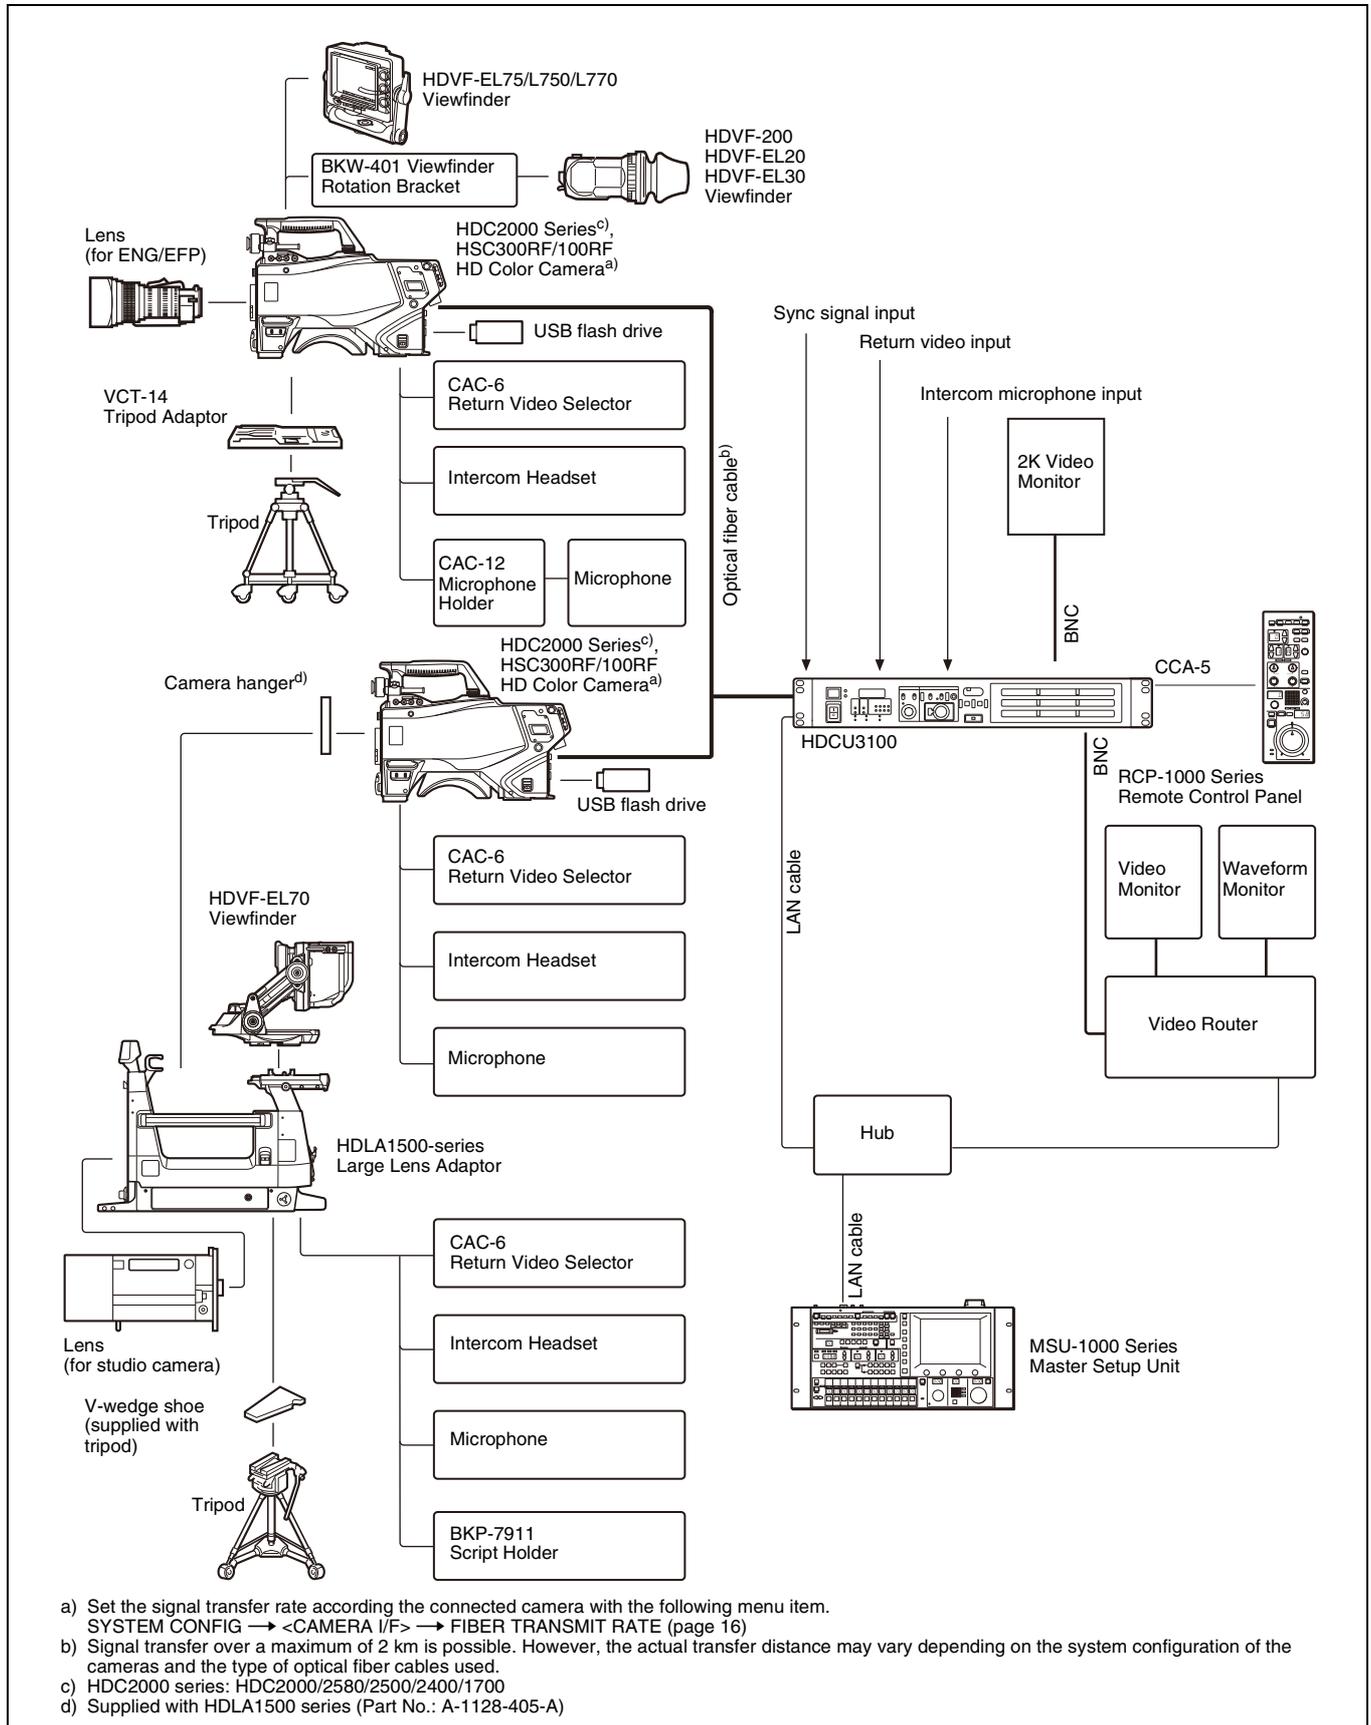

The unit may be combined with an RCP-1000 series Remote Control Panel (optional) to form a camera control system. In addition, by combining the unit with an MSU-1000/1500 Master Setup Unit (optional), you can form a system capable of controlling multiple cameras.

# System Configuration

## Note

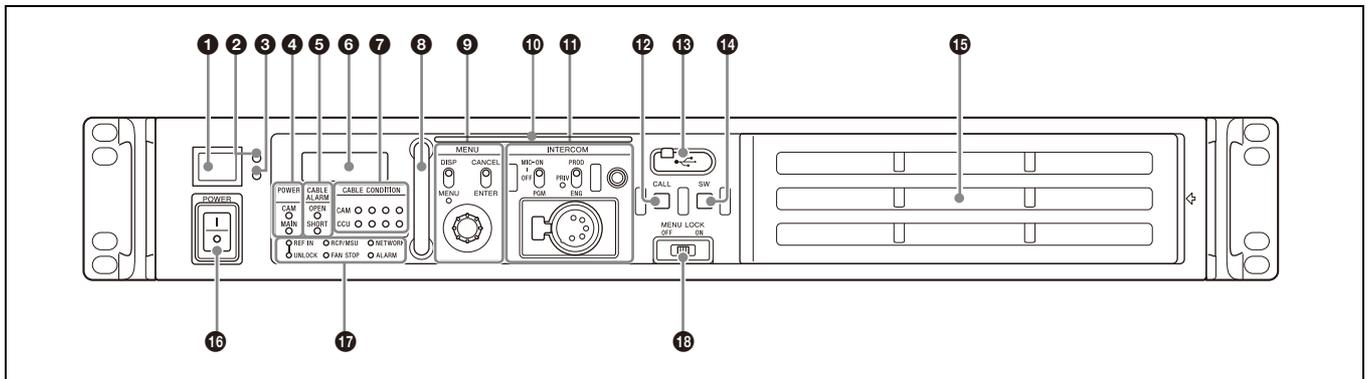

Production of some of the peripherals and related devices shown in the figures may have been discontinued. For advice on choosing devices, please contact your Sony representative or dealer.

## Connection example

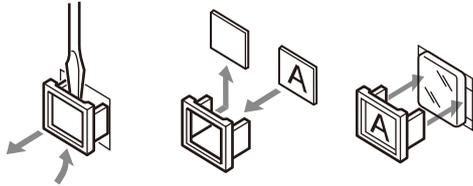

# Location and Function of Parts

## Front Panel

### 1 Red tally indicator

Lights in red when this unit receives a red tally signal. You can attach the supplied number plate here.

### 2 Yellow tally indicator

Lights in yellow when this unit receives a yellow tally signal.

### 3 Green tally indicator

Lights in green when this unit receives a green tally signal.

### 4 POWER indicators

**CAM:** Lights when power is being supplied to the camera.  
**MAIN:** Lights when the unit is turned on. In addition, this flashes when a fan error occurs.

### 5 CABLE ALARM indicators

**OPEN:** Lights when a camera is not connected to the CAMERA FIBER connector on the rear panel of the unit via an optical fiber cable. Power is not supplied to the camera when this indicator lights.

**SHORT:** Lights when an overcurrent flows through the optical fiber cable. Power is not supplied to the camera when this indicator lights.

### 6 CCU number display

Displays the camera number set in the CCU menu.

### 7 CABLE CONDITION (signal reception status) indicators

Indicate the communication status of the camera (CAM) and camera control unit (CCU).

**When the two indicators on the right (green) are lit:** Reception status is excellent.

**When the second indicator from the right (green) is lit:** Reception status is good.

**When the second indicator from the left (yellow) is lit:** Reception status is low.

**When the indicator on the left (red) is lit:** Reception status is at the lowest level.

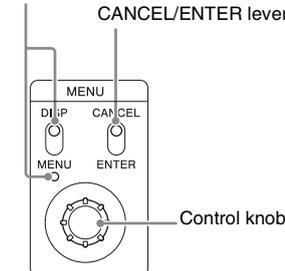

### 8 Guard bar

#### Note

Do not pull the guard bar with excessive force.

### 9 MENU control block

DISP/MENU lever and indicator  
 CANCEL/ENTER lever

#### • DISP/MENU lever and indicator

Selects the status display or setup menu display. In setup menu mode, the indicator turns on.

#### • CANCEL/ENTER lever

In setup menu mode, used to cancel and enter settings.

#### • Control knob (rotary encoder)

In status screen mode, used to change the displayed page. In setup menu mode, used to move the cursor on a page and to change menu settings.

Pushing the control knob has the same function as setting the CANCEL/ENTER level to ENTER.

### 10 SIGNAL BAR indicator

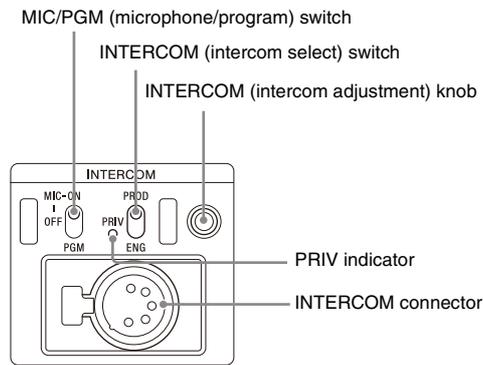

Indicates the output status of the video signal.

**During gray signal output:** Off

**During color bar output:** Lights in the color specified with the MAINTENANCE → <FRONT PANEL> → SIGNAL BAR → READY COLOR menu item.

**During camera video output:** Lights in a white flowing pattern.

### 11 INTERCOM audio input/output and control block

- **INTERCOM (intercom adjustment) knob**

Adjusts the headset audio level.

- **MIC/PGM (microphone/program) switch**

**ON:** Turns the headset microphone on.

**OFF:** Turns the headset microphone off.

**PGM:** Selects program audio output.

- **INTERCOM (intercom select) switch**

Selects the intercom signal input/output connection source for the INTERCOM connector on the front panel.

**PROD:** Connects the producer line.

**PRIV:** Blocks the connection to the producer line or engineer line, allowing private intercom talk between the CCU and the camera.

**ENG:** Connects the engineer line.

- **PRIV (private) indicator**

Lights when the intercom is in private mode.

- **INTERCOM connector (XLR 5-pin)**

Connects the intercom headset.

### 12 Call button

When pressed, this outputs a call signal to the camera or external control device (the RCP-1000 series, etc.) that are connected to this unit. Use this when you want to call and speak with the camera operator or external control device operator via intercom. This button lights in red when it is pressed or the call button of other equipment is pressed.

### 13 USB port

Used to connect to a USB device.

### 14 Assignable button

You can set a function for this button via the CCU menu.

### 15 Filter cover

Press the filter cover in the direction of the arrow while pulling it to remove it.

The filter (black sponge) is placed under the cover. If the filter becomes dirty, you can remove it and clean it with cold or warm water. When using a detergent, use a neutral solution. Be sure to dry the filter thoroughly before replacing it on the unit.

### 16 POWER switch

Turns the entire camera system on and off, including the unit, the camera, and the RCP-1000 series Remote Control Panel connected to the REMOTE connector of this unit. Switch to **I** to turn the power on, and switch to **O** to turn the power off.

### 17 Status display indicators

**REF IN (green):** Indicates presence of reference input signal.

**UNLOCK (red):** The input reference is not locked.

**RCP/MSU:** Displays the status when there is a remote control panel connected.

**On:** Indicates that external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000 series Remote Control Panel, or other equipment) is connected.

**Off:** Indicates that the external control equipment is not connected.

For details, see "NETWORK menu" (page 29).

**NETWORK:** Reserved for future use.

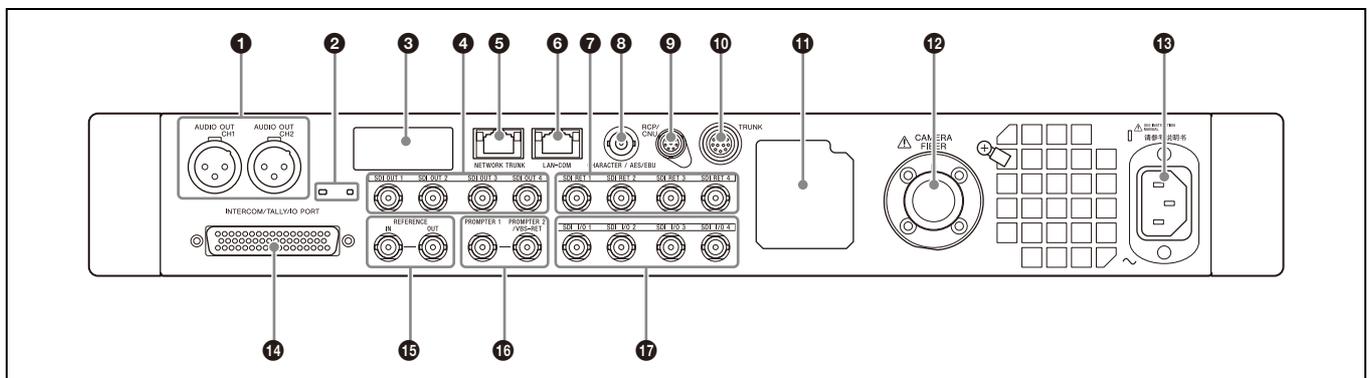

**ALARM:** Lights when various errors occur.

**FAN STOP:** Lights when the fan is stopped.

### 18 Menu lock switch

Locks out operation of the front panel menu operation area.

## Rear Panel

### 1 AUDIO OUT CH1, CH2 (audio output 1, 2) connectors (XLR 3-pin)

Used to output the audio signal to the AUDIO IN connectors of the video camera.

### 2 Rear indicator

Displays calls and statuses.

### 3 Expansion board mounting port

Reserved for future use.

#### ④ SDI OUT (3G/HD/SD-SDI output) 1/2/3/4 connectors

The signal from the video camera may be output as four 3G-SDI signals, HD-SDI signals or SD-SDI signals. They can output signals with superimposed text characters and markers.

*For details on settings, contact a Sony service or sales representative.*

#### ⑤ NETWORK TRUNK connector (RJ-45 8-pin)

Used to connect the NETWORK TRUNK connector of the device connected to the camera with the network connection device.

#### ⑥ LAN-COM connector (RJ-45 8-pin)

Used to connect to a LAN. Connect a LAN hub (10BASE-T/100BASE-TX), using a LAN cable (shielded type of category 5 or more).

#### ⑦ SDI RET (3G/HD/SD-SDI return video input) 1/2/3/4 connectors (BNC-type)

Four different 3G/HD/SD-SDI return video input signals may be received independently. The selection of RET 1 or 4 is made by the return switch of the video camera. The aspect ratio can also be selected for an SD signal. The type of input signal on RET 1 to 4 may be set individually using the setup menu, or using the MSU-1000 series Master Setup Unit.

*For details on the setup menu, contact a Sony service or sales representative.*

*Refer also to the Master Setup Unit manual.*

#### ⑧ CHARACTER (character output) / AES/EBU connector (BNC-type)

**CHARACTER:** Outputs the self-diagnostic results or setup menu of the unit as an SD analog video signal.

**AES/EBU:** Outputs the AES/EBU format digital audio signal that is input to the video camera.

#### ⑨ RCP/CNU connector (round 8-pin)

Used to connect to an MSU-1000 series Master Setup Unit, CNU-700 Camera Command Network Unit, or RCP-1000 series Remote Control Panel via a CCA-5 Connection Cable. Control signals are sent and received via this connector. When using an RCP-1000 series unit, power is also supplied.

#### ⑩ TRUNK connector (round 12-pin)

Used to connect to the CCU connector on a camera via an RS-232C or RS-422A interface. Communication with up to two channels is available.

#### ⑪ Expansion board mounting port

Reserved for future use.

#### ⑫ CAMERA FIBER connector (optical fiber connector)

Used to connect a video camera, using an optical fiber cable. All video camera signals, including power supply, control, video, and audio, are sent and received over one optical fiber cable.

#### Note

Dust on the connection surface of the optical fiber cable may result in transmission errors. When not connected, always cover the end of the connector with the supplied cap.

#### ⑬ ~ AC IN (AC power input) connector

Use the specified AC power cord to connect to an AC power supply. The AC power cord can be secured to this unit, using the plug holder (optional).

#### ⑭ INTERCOM/TALLY/IO PORT (intercom / tally / input/output) connector (D-sub 50-pin)

Used to input and output intercom, tally, and program audio signals. Connect to the intercom/tally/program audio connector of the intercom system.

**REAR PREVIEW function:** 10-pin is assigned for the output pin of the REAR PREVIEW function.

#### ⑮ REFERENCE IN/OUT connectors (BNC-type)

Input an HD tri-level reference sync signal or SD reference signal (black burst signal, or black burst signal with 10Field ID) to the RET IN connector.

The input signal is output from the RET OUT connector as is (loop-through output). When not using loop-through output, terminate the unused connector at 75 ohms.

When a sync signal is not input to the RET IN connector, an SD composite sync or HD tri-level sync signal generated by the internal sync signal generator will be output from the RET OUT connector.

#### ⑯ INPUT area

##### ① PROMPTER (tele-prompter input) 1/2 connectors (BNC-type)

Input the prompter signal of 1 channel or 2 channels depending on the setting of PROMPTER CHANNEL MODE on the <TRUNK/PROMPTER1> page of the MAINTENANCE menu. When 1 channel is set, the input signal is output from the other connector as is (loop-through). If loop-through output is not used, terminate the unused connector at 75 ohms.

When 2 channels are set, both connectors become inputs and they are terminated at 75 ohms inside the unit.

If the signal used is a 1.0 Vp-p, 75-ohm analog signal, it may be output from the PROMPTER OUT connector of the video camera with a frequency bandwidth of 5 MHz, regardless of signal format.

##### ② VBS-RET (VBS return video input) connector\* (BNC-type)

A single VBS return signal can be received independently.

\* This connector doubles as the PROMPTER 2 connector.

The RET selection is made by the return switch of the video camera. The type of input signal on each line of RET may be set individually using the setup menu, or using the MSU-1000 series Master Setup Unit. An aspect ratio may also be selected for SD signals.

*For details on setup menu operations, contact a Sony service or sales representative.*

*Refer also to the Master Setup Unit manual.*

*For details on how to select the signal, contact a Sony service or sales representative.*

**17 SDI I/O (3G/HD-SDI input/output) 1/2/3/4 connectors  
(BNC-type)**

These can be used as return video inputs, HD prompter inputs, camera video signal outputs, and HD-TRUNK outputs. Set them in NETWORK TRUNK on the <TRUNK/PROMPTER> page of the MAINTENANCE menu according to the application.

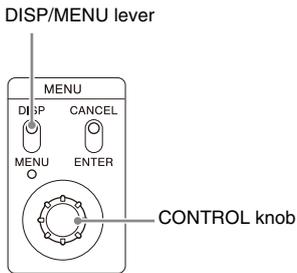

# Status Display

The CCU system status can be monitored using a video monitor connected to the PIX connector.

For information on monitoring and changing settings, see "Menu Settings" (page 11).

## Displaying the Status Screen

The menu screen is controlled using the knob and levers in the MENU control block on the front panel.

### To display the status screen

Set the DISP/MENU lever to the DISP position. The most recently viewed status screen page is displayed. (When first powered on, the camera settings page is displayed.) Turning the CONTROL knob changes the displayed page.

### To exit the status screen display

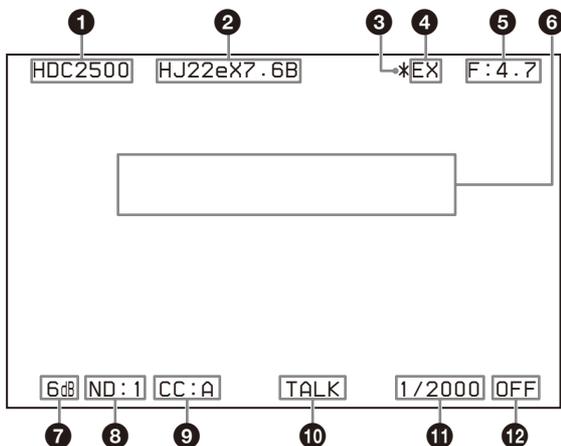

In status screen display mode, set the DISP/MENU lever to the DISP position.

## Status Display Screen

The following information is displayed on the status display screen.

- System status
- Input/output signal format information of each SDI connector
- Camera and unit audio status
- Camera and unit intercom status
- Warning display

### Camera settings

### 1 Camera name indication

Displays the name of the connected camera.

### 2 Lens file name indication

Displays the lens file name.

### 3 F drop indication

Displayed when an F drop occurs.

### 4 EX (lens extender) indication

Displayed during use of the lens extender.

### 5 F-stop value indication

Displays the lens F-stop value (iris value).

### 6 Camera auto control information area

**Top:** Displays the Auto Setup type and execution status.

**Bottom:** Displays the execution item.

### 7 Gain value indication

Displays the video output signal gain setting value (dB).

### 8 ND filter indication

Displays the currently selected ND filter type.

### 9 CC filter indication

Displays the currently selected CC filter type.

### 10 Camera microphone status indication

Displayed when the camera microphone is on.

### 11 Shutter speed/Clear scan frequency indication

Displays the shutter speed. When ECS is on, displays the clear scan frequency.

### 12 Shutter/ECS indication

Displays the on/off state of the shutter/ECS.

### Note

- Items that are turned off using the <DISPLAY> page settings of the VIDEO/MONITOR menu are not displayed.
- A "-" mark is displayed for each item when a camera is not connected.

# Menu Settings

The CCU system and peripheral settings can be checked and modified using a video monitor connected to the PIX connector.

## Changing Menu Item Settings

The menu screen is controlled using the knob and levers in the MENU control block on the front panel. Setting the CANCEL/ENTER lever to the ENTER position and pressing the CONTROL knob perform the same function.

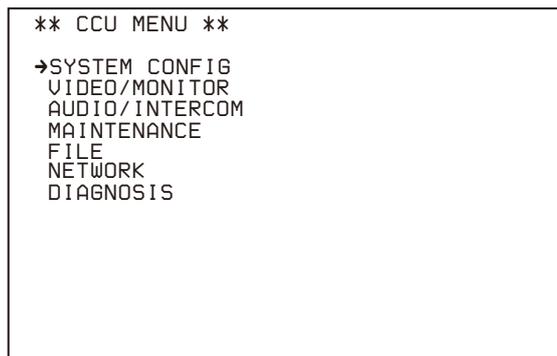

### To display a menu page

Set the DISP/MENU lever to the MENU position. When first powered on, the CCU MENU page is displayed.

When <OUTPUT FORMAT1> → SDI-OUT4 → MONITOR is set to C (characters are not added), you can hold the DISP/MENU lever in the MENU position for 3 seconds to force display of the CCU MENU.

### To display the CCU MENU page

In menu display mode, turn the CONTROL knob to move the pointer (➡) to TOP in the upper right corner of the menu page, then press the CONTROL knob. The CCU MENU showing the menu configuration is displayed.

Menu name	Description
SYSTEM CONFIG	Input/output signal format and system-related settings
VIDEO/MONITOR	Video-related settings
AUDIO/INTERCOM	Audio- and intercom-related settings
MAINTENANCE	CCU configuration settings
FILE	CCU file-related settings

Menu name	Description
NETWORK	Network-related settings
DIAGNOSIS	Displays the unit status.

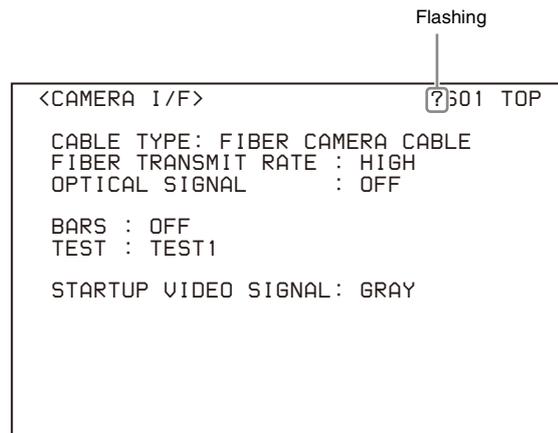

### To select an item in the CCU MENU

Turn the CONTROL knob to move the pointer (➡) to the desired menu item, then press the CONTROL knob. The most recently viewed page in the selected menu is displayed.

### To change the displayed page

- 1 Turn the CONTROL knob to move the pointer (➡) to the page number, then press the CONTROL knob.

The pointer (➡) changes to a flashing question mark (?).

- 2 Turn the CONTROL knob to change the displayed page to the desired page, then press the CONTROL knob.

The question mark (?) changes back to the pointer (➡). Items on the page can now be selected and changed.

### To change a menu item setting

If a question mark (?) is displayed beside the page number, press the CONTROL knob to restore the pointer (➡). Items on the page can now be selected and changed.

- 1 Turn the CONTROL knob to move the pointer to the desired item, then press the CONTROL knob.
- The pointer (➡) changes to a flashing question mark (?).

- 2 Turn the CONTROL knob to change the setting.

#### To cancel a changed setting

Set the CANCEL/ENTER lever to the CANCEL position before pressing the CONTROL knob. The item is restored to its current setting.

#### To suspend menu changes

Set the DISP/MENU lever to the MENU position to exit the menu screen.

The DISP/MENU lever can be set to the MENU position again to restart the operation.

- 3 Press the CONTROL knob.

The question mark (?) changes back to the pointer (➡), and the item setting is registered.

- 4 Repeat steps 1 to 3 to change other settings on the same page.

### To enter a character string

Some menu items require a character string input.

Moving the pointer (➡) to an item with a character string input and pressing the CONTROL knob displays a rectangular cursor and a list of selectable characters.

Turning the CONTROL knob moves the cursor between characters. The following menu item has character strings:

- VIDEO/MONITOR menu →  
<BAR CHARACTER> page → BAR CHARACTER

- 1 Move the text cursor to the input position, then press the CONTROL knob.

A second cursor is displayed in the character list.

- 2 Turn the CONTROL knob to move the cursor to the desired character, then press the CONTROL knob.

Repeat steps 1 and 2 to enter other characters.

- Select INS to insert a space character at the cursor position.
- Select DEL to delete the character at the cursor position.
- Select RET to return to step 1 without changing the string.
- Entering the maximum number of characters (up to the right edge) moves the cursor to ESC on the lower right of the character list.

- 3 Turn the CONTROL knob to move the cursor to END, then press the CONTROL knob.

The new input string is registered.

#### To cancel the character string setting

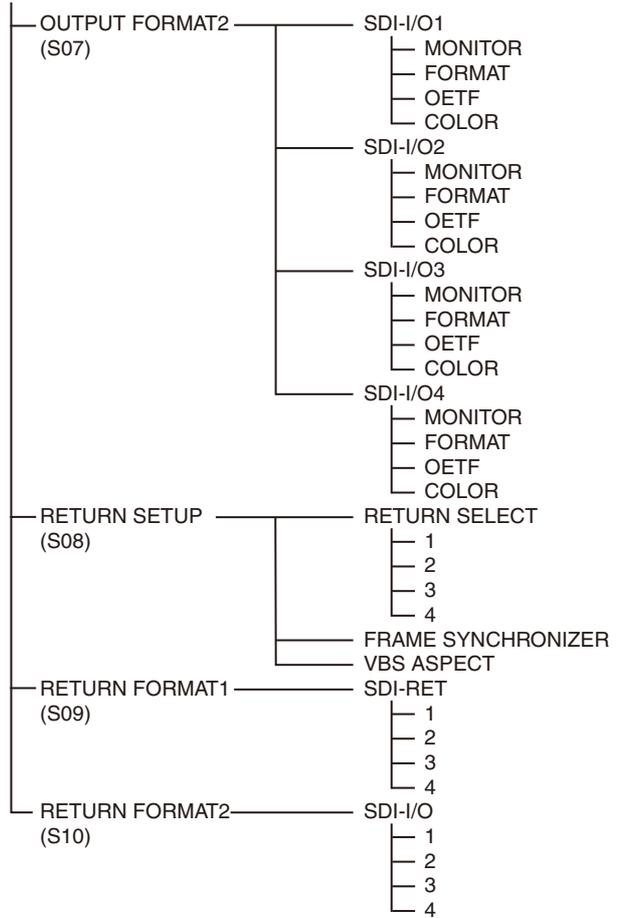

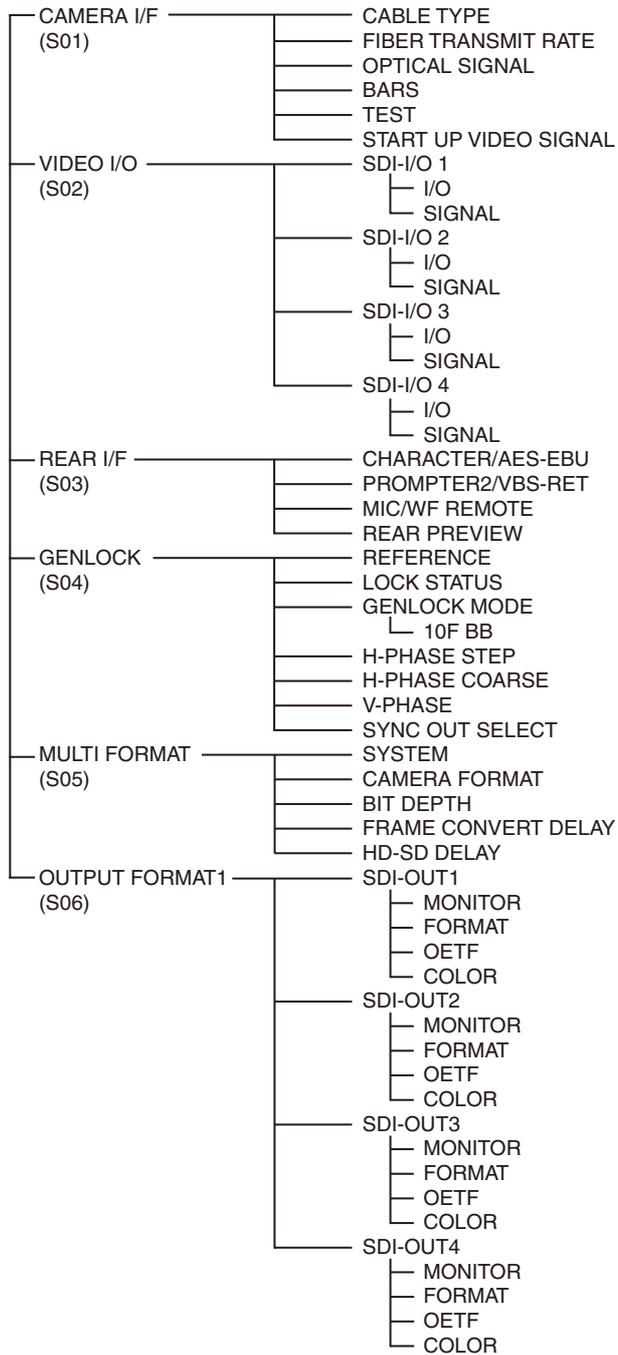

Turn the CONTROL knob to move the cursor to ESC, then press the CONTROL knob.

### To exit the menu display

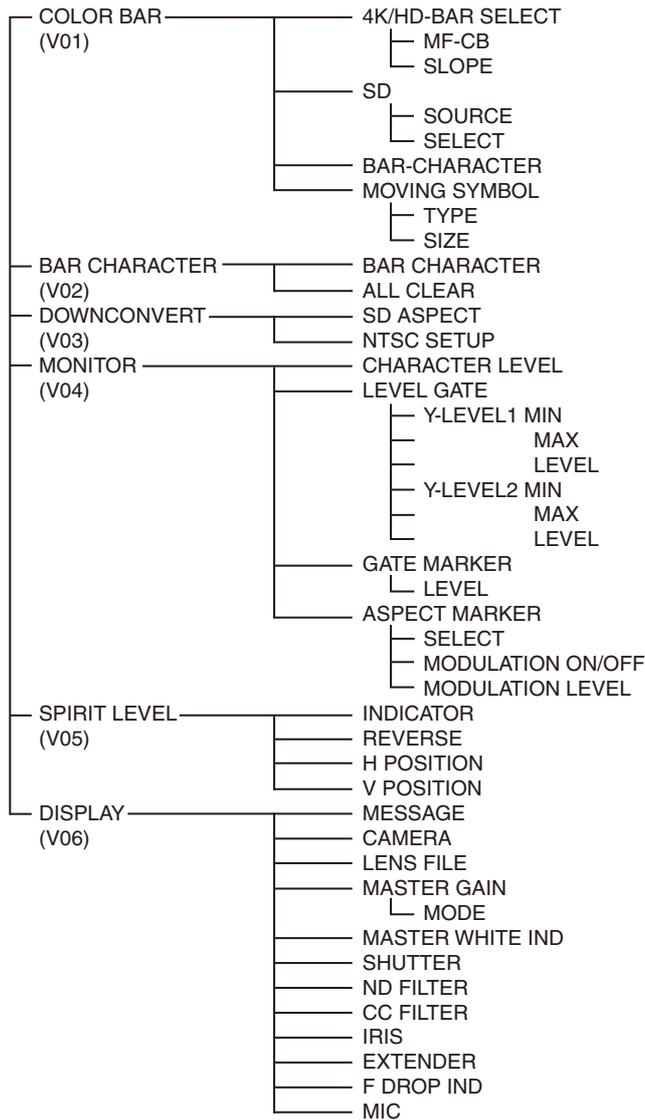

In menu display mode, set the DISP/MENU lever to the MENU position.

## Precautions

If the unit is suddenly taken from a cold to a warm location, or if ambient temperature suddenly rises, moisture may form on the outer surface of the unit and/or inside of the unit. This is known as condensation. If condensation occurs, turn off the unit and wait until the condensation clears before operating the unit. Operating the unit while condensation is present may damage the unit.

The fan and battery are consumable parts that will need periodic replacement.

When operating at room temperature, a normal replacement cycle will be about 5 years. However, this replacement cycle represents only a general guideline and does not imply that the life expectancy of these parts is guaranteed. For details on parts replacement, contact your Sony representative.

The life expectancy of the electrolytic capacitor is about 5 years under normal operating temperatures and normal usage (8 hours per day; 25 days per month).

If usage exceeds the above normal usage frequency, the life expectancy may be reduced correspondingly.

## Operating environment

- Avoid high-temperature rooms and near sources of heat.
- Do not place in locations with strong electric or magnetic field.
- Dry location with good ventilation.
- Avoid locations exposed to sunlight or strong lighting.

## Avoid violent impacts

Dropping the unit, or otherwise imparting a violent shock to it, is likely to cause it to malfunction.

## Do not cover with cloth

While the unit is in operation, do not cover it with a cloth or other material. This can cause the temperature to rise, leading to a malfunction.

## After use

Set the POWER switch to the OFF position.

## Care

If the body or panels of the unit become dirty, wipe them with a dry cloth. For severe dirt, use a soft cloth steeped in a small amount of neutral detergent, then wipe dry. Do not use volatile solvents such as alcohol or thinners, as these may damage the finish.

## To prevent electromagnetic interference from portable communications devices

The use of portable telephones and other communications devices near this unit can result in malfunctions and interference with audio and video signals.

It is recommended that the portable communications devices near this unit be powered off.

## Error Messages

When an error is detected in this unit or the camera, the ALARM indicator turns on and an error message is displayed on this unit.

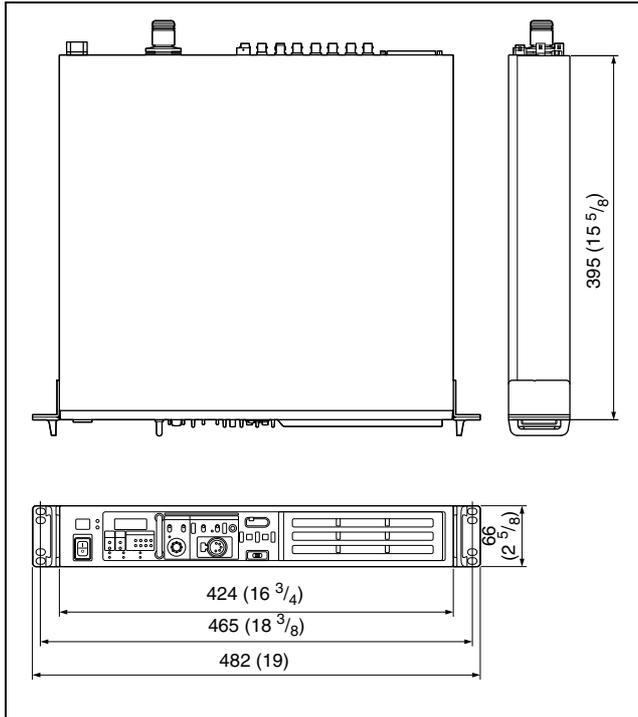

Error Messages	Description
CCU:XXX POWER ERROR	Board power supply error (XXX is the board name)
CCU:XXX PLD ERROR	PLD error (XXX is the board name)
CCU:XXX TEMP WARNING	Board temperature error (XXX is the board name)
CCU:OPTICAL CONDITION OK	Light sensor level on CCU side dropped
CCU:OPTICAL CONDITION WARNING	
CCU:OPTICAL CONDITION CARE	
CCU:OPTICAL CONDITION ERROR	
CCU:PS FAN STOP	Power supply block FAN error
CCU:PS CABLE SHORT	CAMERA connector optical fiber cable short circuit error
CCU:PS CABLE OPEN	CAMERA connector optical fiber cable open circuit error
CCU:PS RCP POWER SUPPLY ERROR	Remote control panel (connected to REMOTE connector) power supply error
CCU:PS TEMP WARNING	Power supply unit temperature error
CCU:PS POWER ERROR	Power supply unit input/output error
CCU:PS POWER WARNING	
CCU:FRONT FAN1 STOP	Front board FAN1 stop
CCU:PS REAR FAN STOP	Power supply block rear FAN error
CCU:GENLOCK ERROR	External reference sync error
CCU:FORCE LEGACY	FORCE LEGACY is set for CNS MODE
CCU:10FIELD-ID ERROR	10Field ID is not detected even though the 10F BB setting is On
CCU:SET DATE&TIME	Invalid date

# Specifications

## General

Power requirements	100 V to 240 V AC, 50/60 Hz
Current consumption	4.5 A (max.)
Operating temperature	5 °C to 40 °C (41 °F to 104 °F)
Storage temperature	-20 °C to +60 °C (-4 °F to +140 °F)
Mass	Approx. 7.3 kg (16 lb. 1.5 oz.)
